Planetary Cartography in the Next Decade (1984-1994) United States. National Aeronautics and Space Administration. Planetary Cartography Working Group, 1984 The cartographic products required to support science and planetary exploration during the next 10 years were assessed Only major map series or first order maps needed to characterize the surface physiography of a planet or satellite were considered Included in these considerations are maps needed as bases for plotting geologic geophysical and atmospheric phenomena and for planning future planetary exploration These products consist of three types of maps controlled photomosaics shaded relief maps and topographic contour maps **Exploring Caves**, 1997 *Giant Molecular Clouds in the Galaxy* P. M. Solomon, M. G. Edmunds, 2013-10-22 Giant Molecular Clouds in the Galaxy Third Gregynog Astrophysics Workshop covers the proceedings of the 1977 Third Gregynog Astrophysics Workshop on Giant Molecular Clouds GMC held at the University of Wales This book is organized into 11 parts encompassing 33 chapters After a brief introduction to the significant features of GMC this book goes on examining radio millimeter and galactic center observations of GMC along with their infrared properties and kinematics Other parts deal with the water sources in GMC time variation in interstellar water masers and the relation of HII regions to molecular clouds The remaining parts discuss the evolution of interstellar molecular clouds and the role of magnetic fields in the collapse of protostellar gas clouds These parts also cover the chemistry of interstellar molecules containing nitrogen and the search for other planetary systems This book will prove useful to cloud scientists physicists astronomers and researchers Image Processing and GIS for Remote Sensing Jian Guo Liu, Philippa J. Mason, 2016-03-21 Following the successful publication of the 1st edition in 2009 the 2nd edition maintains its aim to provide an application driven package of essential techniques in image processing and GIS together with case studies for demonstration and guidance in remote sensing applications The book therefore has a 3 in 1 structure which pinpoints the intersection between these three individual disciplines and successfully draws them together in a balanced and comprehensive manner The book conveys in depth knowledge of image processing and GIS techniques in an accessible and comprehensive manner with clear explanations and conceptual illustrations used throughout to enhance student learning The understanding of key concepts is always emphasised with minimal assumption of prior mathematical experience The book is heavily based on the authors own research Many of the author designed image processing techniques are popular around the world For instance the SFIM technique has long been adopted by ASTRIUM for mass production of their standard Pan sharpen imagery data The new edition also includes a completely new chapter on subpixel technology and new case studies based on their recent research *Science and Applications of Coastal Remote Sensing* Kevin Ross Turpie, Tiffany Kay Moisan, Kristin B. Byrd, Steven G. Ackleson, 2021-06-01 IN MEMORIAL This Research Topic is dedicated to our co editor Dr Tiffany Moisan a well regarded ocean color remote sensing scientist who unexpectedly passed away during its preparation Dr Moisan was a dear friend and upbeat and enthusiastic colleague and a scientist committed to the use of

remote sensing to improve our understanding of marine microbiology and phytoplankton ecology She was a strong supporter of the development of remote sensing capabilities and applications for coastal and inland waters and we know that she would have wanted this Research Topic to provide her colleagues an opportunity to share and promote their work in this area A voice in our community is now quiet Let the chorus of our shared song continue with her memory Dr Tiffany Moisan is survived by her loving family including her husband Dr John Moisan and her two daughters

Soviet Natural Resources in the World Economy Robert G. Jensen, Theodore Shabad, Arthur W. Wright, 1983-08 Russia is a huge storehouse of natural resources including oil gas and other energy sources which she can trade with the rest of the world for advanced technology and wheat In this book leading experts evaluate the Soviet potential in major energy and industrial raw materials giving special attention to implications for the world economy to the end of the twentieth century The authors examine the mineral and forest resources that the Soviet Union has developed and may yet develop to provide exports during the 1980s They discuss the regional dimension of these resources especially in Siberia and the Soviet Far East individual mineral raw materials such as petroleum natural gas timber iron ore manganese and gold and finally the role of raw materials in Soviet foreign trade The authors representing the United States Canada and Great Britain are primarily geographers but they include economists political scientists and a geologist Their work is based on primary sources for most of these reports current information is no longer being released to researchers and on interviews with Soviet officials

Remote Sensing for Geoscientists Gary L. Prost, 2025-06-16 The fourth edition of the bestselling Remote Sensing for Geoscientists Image Analysis and Integration expands the scope of remote sensing to cover image systems that did not exist 11 years ago when the third edition was published It is thoroughly updated to meet the needs of readers today and provides examples of new capabilities using Google Earth and various apps It describes the latest remote sensing systems and sensors provides examples of imagery and explains how to analyze and integrate remote sensing images in projects that require superior results Lavishly illustrated it serves as a how to guide for those using remote sensing in Earth Sciences for mapping and monitoring New in the Fourth Edition Thoroughly revised to address remote sensing technological advances achieved in recent years Includes new examples of using remote sensing for successful projects in water oil gas and mineral exploration and exploitation forensic remote sensing and environmental monitoring Reviews the latest instrumentation processing and integrated analysis of imagery Includes two new chapters including one on clandestine geologic remote sensing and a new chapter on free Google Earth software to remotely sense anywhere on Earth and process imagery to highlight geologic features Maintains a clear style and simple language understandable by the average person This is a terrific all encompassing text for professionals in industry and governmental agencies academics and students who are part of the remote sensing and geospatial community and working in the fields of geology geosciences energy and mining industry groundwater and environmental engineering and for those who are involved in monitoring natural resources the environment
