Regular Fabrics in Deep Sub-Micron Integrated-Circuit Design Fan Mo,Robert K. Brayton,2007-05-08 Regular Fabrics in Deep Sub Micron Integrated Circuit Design discusses new approaches to better timing closure and manufacturability of DSM Integrated Circuits The key idea presented is the use of regular circuit and interconnect structures such that area delay can be predicted with high accuracy The co design of structures and algorithms allows great opportunities for achieving better final results thus closing the gap between IC and CAD designers The regularities also provide simpler and possibly better manufacturability In this book we present not only algorithms for solving particular sub problems but also systematic ways of organizing different algorithms in a flow to solve the design problem as a whole A timing driven chip design flow is developed based on the new structures and their design algorithms which produces faster chips in a shorter time *EDA for IC Implementation, Circuit Design, and Process Technology* Luciano Lavagno,Louis Scheffer,Grant Martin,2018-10-03 Presenting a comprehensive overview of the design automation algorithms tools and methodologies used to design integrated circuits the Electronic Design Automation for Integrated Circuits Handbook is available in two volumes The second volume EDA for IC Implementation Circuit Design and Process Technology thoroughly examines real time logic to GDSII a file format used to transfer data of semiconductor physical layout analog mixed signal design physical verification and technology CAD TCAD Chapters contributed by leading experts authoritatively discuss design for manufacturability at the nanoscale power supply network design and analysis design modeling and much more Save on the complete set **Electronic Design Automation for IC Implementation, Circuit Design, and Process Technology** Luciano Lavagno,Igor L. Brayton, Alberto L. Sangiovanni-Vincentelli, 2012-12-06 This book was motivated by the problems being faced with shrinking IC process feature sizes It is well known that as process feature sizes shrink a host of electrical problems like cross talk electromigration self heat etc are becoming important Cross talk is one of the major problems since it results in unpredictable design behavior In particular it can result in significant delay variation or signal integrity problems in a wire depending on the state of its neighboring wires Typical approaches to tackle the cross talk problem attempt to fix the problem once it is created In our approach we ensure that cross talk is eliminated by design The work described in this book attempts to take an outside the box view and propose a radically different design style This design style first imposes a fixed layout pattern or fabric on the integrated circuit and then embeds the circuit being implemented into this fabric The fabric is chosen carefully in order to eliminate the cross talk problem being faced in modem IC processes With our choice of fabric cross talk between adjacent wires on an IC is reduced by between one and two orders of magnitude In this way the fabric concept eliminates cross talk up front and by design We propose two separate design flows each of which uses the fabric concept to implement logic The first flow uses fabric compliant standard cells as an im plementation vehicle We call these cells fabric cells and they have the same logic functionality as existing standard cells with which they are compared **Interconnect-Centric Design for Advanced SOC and NOC** Jari Nurmi, H. Tenhunen, J. Isoaho, Axel Jantsch, 2006-03-20 In Interconnect centric Design for Advanced SoC and NoC we have tried to create a comprehensive understanding about on chip interconnect characteristics design methodologies layered views on different abstraction levels and finally about applying the interconnect centric design in system on chip design Traditionally on chip communication design has been done using rather ad hoc and informal approaches that fail to meet some of the challenges posed by next generation SOC designs such as performance and throughput power and energy reliability predictability synchronization and management of concurrency To address these challenges it is critical to take a global view of the communication problem and decompose it along lines that make it more tractable We believe that a layered approach similar to that defined by the communication networks community should also

be used for on chip communication design The design issues are handled on physical and circuit layer logic and architecture layer and from system design methodology and tools point of view Formal communication modeling and refinement is used to bridge the communication layers and network centric modeling of multiprocessor on chip networks and socket based design will serve the development of platforms for SoC and NoC integration Interconnect centric Design for Advanced SoC and NoC is concluded by two application examples interconnect and memory organization in SoCs for advanced set top boxes and TV and a case study in NoC platform design for more generic applications *Electronic Design Automation* Laung-Terng

On-Chip Communication Architectures Sudeep Pasricha,Nikil Dutt,2010-07-28 Over the past decade system on chip SoC designs have evolved to address the ever increasing complexity of applications fueled by the era of digital convergence Improvements in process technology have effectively shrunk board level components so they can be integrated on a single chip New on chip communication architectures have been designed to support all inter component communication in a SoC design These communication architecture fabrics have a critical impact on the power consumption performance cost and design cycle time of modern SoC designs As application complexity strains the communication backbone of SoC designs academic and industrial R D efforts and dollars are increasingly focused on communication architecture design On Chip Communication Architectures is a comprehensive reference on concepts research and trends in on chip communication architecture design It will provide readers with a comprehensive survey not available elsewhere of all current standards for on chip communication architectures A definitive guide to on chip communication architectures explaining key concepts surveying research efforts and predicting future trends Detailed analysis of all popular standards for on chip communication architectures Comprehensive survey of all research on communication architectures covering a wide range of topics relevant to this area spanning the past several years and up to date with the most current research efforts Future trends that will have a significant impact on research and design of communication architectures over the next

several years Regular Nanofabrics in Emerging Technologies M. Haykel Ben Jamaa, 2011-03-24 Regular Nanofabrics in Emerging Technologies gives a deep insight into both fabrication and design aspects of emerging semiconductor technologies that represent potential candidates for the post CMOS era Its approach is unique across different fields and it offers a synergetic view for a public of different communities ranging from technologists to circuit designers and computer scientists The book presents two technologies as potential candidates for future semiconductor devices and systems and it shows how fabrication issues can be addressed at the design level and vice versa The reader either for academic or research purposes will find novel material that is explained carefully for both experts and non initiated readers Regular Nanofabrics in Emerging Technologies is a survey of post CMOS technologies It explains processing circuit and system level design for people with various backgrounds *Minimizing and Exploiting Leakage in VLSI Design* Nikhil Jayakumar, Suganth Paul, Rajesh Garg, 2009-12-02 Power consumption of VLSI Very Large Scale Integrated circuits has been growing at an alarmingly rapid rate This increase in power consumption coupled with the increasing demand for portable hand held electronics has made power consumption a dominant concern in the design of VLSI circuits today Traditionally dynamic switching power has dominated the total power consumption of an IC However due to current scaling trends leakage power has now become a major component of the total power consumption in VLSI circuits Leakage power reduction is especially important in portable hand held electronics such as cell phones and PDAs This book presents two techniques aimed at reducing leakage power in digital VLSI ICs The first technique reduces leakage through the selective use of high threshold voltage sleep transistors The second technique reduces leakage by applying the optimal Reverse Body Bias RBB voltage This book also shows readers how to turn the leakage problem into an opportunity through the use of sub threshold logic
