Regulation And Control In Living Systems:

Regulation and Control in Living Systems Hans Kalmus, 1967 Principles of Biological Regulation Richard Jones, 2012-12-02 Principles of Biological Regulation An Introduction to Feedback Systems presents some understanding of control regulatory and feedback mechanisms in biological systems This book discusses concepts related to the dynamic behavior of both individual biological processes and systems of processes that make up an organism Comprised of 10 chapters the book also describes the characteristics of biological feedback systems focusing on the physical concepts After briefly dealing with involved regulatory processes in biological systems the book goes on discussing the flow or transport of material through a series of processes in the steady state Next chapter uses superposition principle to explain the changes that biological systems undergo following a disturbance or under dynamic behavior The subsequent chapters cover the fundamental principles of negative biological feedback and to the effects it produces both under steady state and dynamic behavior Other chapters describe the effect of sinusoid signals on biological processes and present some stability criteria applied to technological systems and also their value in the study of homeostatic processes The book also discusses some aspects of homeostats that seem to distinguish them from technological feedback systems These features include not only the components themselves and their organization but also the experimental problems involved in their study The concluding chapters describe nonlinear behavior with great relevance to homeostatic systems and rate processes production or destruction for which the roles of stimulus and initial conditions are different Mathematical relations developed from the conservation of mass and the mass action for chemical reactions are also presented The book is an invaluable resource for life scientists and researchers Developing Synthetic Transport Systems Alexey Melkikh, Maria Sutormina, 2013-02-01 Understanding the general laws of an effective system for the transport of substances in cells is an important goal of systems and synthetic biology and will help us to answer why the transport subsystem of a cell is arranged as it is In addition the construction of models for optimizing transport systems is of considerable importance in the early stages in the development of a functioning protocell The aim of this book is to describe the latest techniques for the calculation of the optimal parameters of the transport subsystem of a cell at its maximum efficiency The book will describe linear and nonlinear programming dynamic programming game theory for models of ion transport in different types of cells e g mammalian cells bacteria plants and fungi **Thermodynamic Bases of Biological Processes** A.
