Regulatory Mechanisms Of Human Neoplastic Cell Growth By Cytokines Past And Future Prospect:

Regulation of Human Cancer by Cytokines Fumimaro,1993-08-31 This book considers clinical problems associated with new modalities of cancer treatment involving recombinant cytokines The first half of the book is devoted to various types of associations of cytokines with tumor cells while the second half addresses the therapeutic potential of multidisciplinary devices in biological treatment with recombinant cytokine Some of these indicate the future direction of cancer treatment Division of Basic Sciences Annual Research Directory National Cancer Institute (U.S.). Division of Basic Sciences,1996 A Historical Perspective on Evidence-Based Immunology Edward J. Moticka,2015-11-25 A Historical Perspective on Evidence Based Immunology focuses on the results of hypothesis driven controlled scientific experiments that have led to the current understanding of immunological principles The text helps beginning students in biomedical disciplines understand the basis of immunologic knowledge while also helping more advanced students gain further insights The book serves as a crucial reference for researchers studying the evolution of ideas and scientific methods including fundamental insights on immunologic tolerance interactions of lymphocytes with antigen TCR and BCR the generation of diversity and mechanism of tolerance of T cells and B cells the first cytokines the concept of autoimmunity the identification of NK cells as a unique cell type the structure of antibody molecules and identification of Fab and Fc regions and dendritic cells Provides a complete review of the hypothesis driven controlled scientific experiments that have led to our current understanding of immunological principles Explains the types of experiments that were performed and how the interpretation of the experiments altered the understanding of immunology Presents concepts such as the division of lymphocytes into functionally different populations in their historical context Includes fundamental insights on immunologic tolerance interactions of lymphocytes with antigen TCR and BCR and the generation of diversity and mechanism of tolerance of T and B cells Cumulated Index Medicus ,1993 **CTLA-4: Challenges, limitations, and future perspective in cancer immunotherapy** Sina Taefehshokr,Behzad Baradaran,Nima Taefehshokr,2023-10-05 **Immunotherapy and multimodality therapy for lung cancer** Qun Xue,Jie Mei,Zichao Luo,Wenjun Mao,Yuan Wan,Yifei Liu,2024-02-07

Index Medicus ,2001 Handbook of Photomedicine Michael R. Hamblin,Yingying Huang,2013-10-22 Providing the most comprehensive up to date coverage of this exciting biomedical field Handbook of Photomedicine gathers together a large team of international experts to give you a complete account of the application of light in healthcare and medical science The book progresses logically from the history and fundamentals of photomedicine to di Radiation and the Immune System: Current Knowledge and Future Perspectives Katalin Lumnitzky,Serge M. Candéias,Udo S. Gaipl,Benjamin Frey,2018-05-03 For long high dose ionizing radiation was considered as a net immune suppressing agent as shown among others by the exquisite radiosensitivity of the lymphoid system to radiation induced cell killing However recent advances in radiobiology and immunology have made this picture more complex For example the recognition that radiation induced

bystander effects share common mediators with various immunological signalling processes suggests that they are at least partly immune mediated Another milestone was the finding in the field of onco immunology that local tumor irradiation can modulate the immunogenicity of tumor cells and the anti tumor immune responsiveness both locally in the tumor microenvironment and at systemic level These observations paved the way for studies exploring optimal combinations of radiotherapy and immunotherapy in order to achieve a synergistic effect to eradicate tumors However not all interactions between radiation and the immune system are beneficial as it was recognized that many of radiation induced late side effects are also of immune and inflammatory nature Currently perhaps the most studied field of research in radiation biology is focused around the biological effects of low doses where many of the observed pathophysiological endpoints are due to mechanisms other than direct radiation induced cell killing and are immune related Finally it must not be forgotten that the interactions between the ionizing radiations and the immune system are bi directional and activation of the immune system also influences the outcome of radiation exposure This Research Topic brings together 23 articles and aims to give an overview of the complex and very often contradictory nature of the interactions between ionizing radiation and the immune system Due to its increasing penetrance in the population both through medical diagnostic or environmental sources or during cosmic travel low dose ionizing radiation exposure is becoming a major epidemiological concern world wide Several of the articles within the Research Topic specifically address potential long term health consequences and the underlying mechanisms of low dose radiation exposure A major intention of the Editors was also to draw the attention of the non radiobiological scientific community on the fact that ionizing radiation is by far more than purely an immune suppressing agent Environmental Health Perspectives ,1993
