

The background of the top half of the cover features several faint, light-green diagrams. On the left, there are two sets of 3D coordinate axes, (x, y, z) and (x', y', z') , illustrating Lorentz transformations. The x' axis is shown at an angle θ to the x axis, and the z' axis is perpendicular to the x' axis. A velocity vector $\vec{v}$ is shown along the x' axis. On the right, there are diagrams of magnetic fields. One shows a circular magnetic field $\vec{B}$ around a central point O . Another shows a magnetic field $\vec{B}'$ around a point O' in a moving frame, with a velocity vector $\vec{v}$ shown. A third diagram shows a magnetic field $\vec{B}$ around a point O with a velocity vector $\vec{v}$ shown.

Evolution of Black Holes in Anti-de Sitter Spacetime and the Firewall Controversy Yen Chin Ong, 2015-11-27 This thesis focuses on the recent firewall controversy surrounding evaporating black holes and shows that in the best understood example concerning electrically charged black holes with a flat event horizon in anti de Sitter AdS spacetime the firewall does not arise. The firewall which surrounds a sufficiently old black hole threatens to develop into a huge crisis since it could occur even when spacetime curvature is small which contradicts general relativity. However the end state for asymptotically flat black holes is ill understood since their curvature becomes unbounded. This issue is avoided by working with flat charged black holes in AdS. The presence of electrical charge is crucial since black holes inevitably pick up charges throughout their long lifetime. These black holes always evolve toward extremal limit and are then destroyed by quantum gravitational effects. This happens sooner than the time required to decode Hawking radiation so that the firewall never sets in as conjectured by Harlow and Hayden. Motivated by the information loss paradox the author also investigates the possibility that monster configurations might exist with an arbitrarily large interior bounded by a finite surface area. Investigating such an object in AdS shows that in the best understood case such an object much like a firewall cannot exist.

Classical Electrodynamics S.P Puri, 2011-02-17 CLASSICAL ELECTRODYNAMICS covers the development of Maxwell's theory of electromagnetism in a systematic manner and comprises the time independent electric and magnetic fields boundary value problems and Maxwell's equations. The generation and propagation of electromagnetic waves in unbounded and bounded media special theory of relativity charged particle dynamics magneto hydrodynamics and the formal structure of covariance as applied to Maxwell's theory are also included. In addition the emission of radiation from accelerated charges and the resulting radiation reaction including Bremsstrahlung Cerenkov radiation scattering absorption causality and dispersion relations are covered adequately. The energy loss from charged particles multipole radiation and Hamiltonian formulation of Maxwell's equations constitute the finale of the book.

Classical Electrodynamics John David Jackson, 1998-08-14 Ein Klassiker im neuen Gewand. Diese Neuauflage behandelt in bekannter, verständlicher und umfassender Weise alle Grundlagen und fortgeschrittenen Aspekte der klassischen und semiklassischen Elektrodynamik und wurde darüber hinaus um die Neuheiten der vergangenen zwanzig Jahre: Synchrotronstrahlung, Undulatoren, Wiggler, ergötzt. Ebenfalls besprochen werden die Grundgedanken numerischer Methoden der Elektrostatik und Magnetostatik, so daß der Leser die theoretische Basis einschlägiger Computerprogramme verstehen lernt. 01 99

Black Holes, Cosmology And Extra Dimensions (Second Edition) Kirill A Bronnikov, Sergey G Rubin, 2021-06-29 Assuming basic knowledge of special and general relativity this book guides the reader to problems under consideration in modern research concerning black holes, wormholes, cosmology and extra dimensions. Its first part is devoted to local strong field configurations: black holes and wormholes in general relativity and its most relevant extensions: scalar tensor $f(R)$ and multidimensional theories. The second part discusses cosmology including inflation and problems of a unified

description of the whole evolution of the universe The third part concerns multidimensional theories of gravity and contains a number of original results obtained by the authors Expository work is conducted for a mechanism of symmetries and fundamental constants formation The original approach to nonlinear multidimensional gravity that is able to construct a unique perspective describing different phenomena is highlighted Much of the content was previously presented only in journal publications and is new for book contents e g on regular black holes various scalar field solutions wormholes and their stability inflation clusters of primordial black holes and multidimensional gravity The last two topics are added in this new edition of the book The other chapters are also updated to include new discoveries like the detection of gravitational waves

An Introduction to Covariant Quantum Mechanics Josef Janyška, Marco Modugno, 2022-04-06 This book deals with an original contribution to the hypothetical missing link unifying the two fundamental branches of physics born in the twentieth century General Relativity and Quantum Mechanics Namely the book is devoted to a review of a covariant approach to Quantum Mechanics along with several improvements and new results with respect to the previous related literature The first part of the book deals with a covariant formulation of Galilean Classical Mechanics which stands as a suitable background for covariant Quantum Mechanics The second part deals with an introduction to covariant Quantum Mechanics Further in order to show how the presented covariant approach works in the framework of standard Classical Mechanics and standard Quantum Mechanics the third part provides a detailed analysis of the standard Galilean space time along with three dynamical classical and quantum examples The appendix accounts for several non standard mathematical methods widely used in the body of the book

100 Years Of Gravity And Accelerated Frames: The Deepest Insights Of Einstein And Yang-mills Jong-ping Hsu, Dana S Fine, 2005-08-26 This collection of papers presents ideas and problems arising over the past 100 years regarding classical and quantum gravity gauge theories of gravity and spacetime transformations of accelerated frames Both Einstein s theory of gravity and the Yang Mills theory are gauge invariant The invariance principles in physics have transcended both kinetic and dynamic properties and are at the very heart of our understanding of the physical world In this spirit this book attempts to survey the development of various formulations for gravitational and Yang Mills fields and spacetime transformations of accelerated frames and to reveal their associated problems and limitations The aim is to present some of the leading ideas and problems discussed by physicists and mathematicians We highlight three aspects formulations of gravity as a Yang Mills field first discussed by Utiyama problems of gravitational theory discussed by Feynman Dyson and others spacetime properties and the physics of fields and particles in accelerated frames of reference These unfulfilled aspects of Einstein and Yang Mills profound thoughts present a great challenge to physicists and mathematicians in the 21st century

wishers felt that it would be appropriate to celebrate the occasion by bringing out a volume in his honour Those of us who have had the good fortune to know Vishu know that he is unique in a class by himself Having been given the privilege to be the volume s editors we felt that we should attempt something different in this endeavour Vishu is one of the well known relativists from India whose pioneer ing contributions to the studies of black holes is universally recognised He was a student of Charles Misner His Ph D thesis on the stability of the Schwarzschild black hole coordinate invariant characterisation of the stationary limit and event horizon for Kerr black holes and subsequent seminal work on quasi normal modes of black holes have passed on to become the starting points for detailed mathematical investigations on the nature of black holes He later worked on other aspects related to black holes and compact objects Many of these topics have matured over the last thirty years New facets have also developed and become current areas of vigorous research interest No longer are black holes ultracompact objects or event horizons mere idealisations of mathematical physicists but concrete entities that astrophysicists detect measure and look for Astrophysical evidence is mounting up steadily for black holes

The True Story of Modern Cosmology Emilio Elizalde, 2021-08-19 This book tells the story of how over the past century dedicated observers and pioneering scientists achieved our current understanding of the universe It was in antiquity that humankind first attempted to explain the universe often with the help of myths and legends This book however focuses on the time when cosmology finally became a true science As the reader will learn this was a slow process extending over a large part of the 20th century and involving many astronomers cosmologists and theoretical physicists The book explains how empirical astronomical data e g Leavitt Slipher and Hubble were reconciled with Einstein s general relativity a challenge which finally led Friedmann De Sitter and Lema tre and eventually Einstein himself to a consistent understanding of the observational results The reader will realize the extraordinary implications of these achievements and how deeply they changed our vision of the cosmos From being small static immutable and eternal it became vast and dynamical originating from almost nothing and yet now nearly 14 billion years later undergoing accelerated expansion But as always happens as well as precious knowledge new mysteries have also been created where previously absolute certainty had reigned
