Reverse Osmosis Membrane Research:

Reverse Osmosis Membrane Research H. Lonsdale, 2012-12-06 This book had its origin in the symposium on Polymers for Desalination sponsored by the Division of Polymer Chemistry of the American Chemical Society and held in September 1971 in Washington D C at the 162nd national meeting of the Society However the book is not simply the proceedings of that symposium A number of additional papers were contributed by other workers in the field and the original papers presented at the symposium have for the most part been expanded The book thus represents a broad cross section of membrane research and development activities in the United States and abroad within the field of reverse osmosis The purposes of the book are to bring attention to important new developments in this field to suggest what the next generation of reverse osmosis equipment may look like and to indicate where further research and development are needed The vast majority of the papers collected here represent work supported by the Office of Saline Water of the United States Department of the Interior and the emphasis here is clearly on the application of the reverse osmosis process to water purification However many of the concepts methods and conclusions are expected to be useful in other areas of membrane science and technology

Controlling Biofouling in Seawater Reverse Osmosis Membrane Systems Nirajan Dhakal, 2017-12-01 Seawater desalination is a rapidly growing coastal industry that is increasingly threatened by algal blooms Depending on the severity of algal blooms desalination systems may be forced to shut down because of clogging and or poor feed water quality To maintain stable operation and provide good feed water quality to seawater reverse osmosis SWRO systems ultrafiltration UF pre treatment is proposed This research focused on assessing the ability of UF and other pre treatment technologies to reduce biofouling in SWRO systems An improved method to measure bacterial regrowth potential BRP was developed and applied at laboratory pilot and full scale to assess the ability of conventional UF 150 kDa and tight UF 10 kDa alone and in combination with a phosphate adsorbent to reduce regrowth potential and delay the onset of biofouling in SWRO The improved bacterial regrowth potential method employs a natural consortium of marine bacteria as inoculum and flow cytometry The limit of detection of the BRP method was lowered to 43 000 12 000 cells mL which is equivalent to 9 3 2 6 g C glucose L The reduction in bacterial regrowth potential after tight UF 10 kDa was 3 to 4 times higher than with conventional UF 150 kDa It was further reduced after the application of a phosphate adsorbent independent of pore size of the UF membrane Pilot studies demonstrated that the application of tight UF 10 kDa coupled with a phosphate adsorbent consistently lowered the bacterial regrowth potential and no feed channel pressure drop increase was observed in membrane fouling simulators MFS over a period of 21 days The study also showed that non backwashable fouling of UF membranes varied strongly with the type of algal species and the algal organic matter AOM they release The presence of polysaccharide stretching OH and sugar ester groups stretching S O was the main cause of non backwashable fouling In conclusion this study showed that an improved BRP method is suitable for the assessment of SWRO pre treatment systems and it can be a useful tool to develop potential strategies to mitigate biofouling and improve the sustainability of SWRO systems

Synthetic Membranes: P.M. Bungay, H.K. Lonsdale, M.N. de Pinho, 2012-12-06 The chapters in this book are based upon lectures given at the NATO Advanced Study Institute on Synthetic Membranes June 26 July 8 1983 Alcabideche Portugal which provided an integrated presentation of synthetic membrane science and technology in three broad areas Currently available membrane formation mechanisms are reviewed as well as the manner in which synthesis conditions can be controlled to achieve desired membrane structures Membrane performance in a specific separation process involves complex phenomena the understanding of which requires a multidisciplinary approach encompassing polymer chemistry physical chemistry and chemical engineering Progress toward a global understanding of membrane phenomena is described in chapters on the principles of membrane transport The chapters on membrane processes and applications highlight both established and emerging membrane processes and elucidate their myriad applications It is our hope that this book will be an enduring comprehensive compendium of the state of knowledge in the field of synthetic membranes We have been encouraged in that hope by numerous expressions of interest in the book coming from a variety of potential users Water
