Electromagnetic Nondestructive Evaluation Toshiyuki Takagi,John R. Bowler,Yoshikatsu Yoshida,1997 Eddy current testing is a key technology among electromagnetic non destructive testings at present and this situation was motivated by a stringent need to detect small cracks in tubing of a steam generator of nuclear power plants In these five years the ECT technology has been enhanced very much demonstrating that high performed sensors for ECT are now ready to be applied to the annual inspection of steam generator tubing with use of arrayed micro sensors for ECT In addition to the innovative technology an inversion technique is

being theoretically developed to make reconstruction of defects possible with use of data from the arrayed sensors Rapid growth of interest in electromagnetic nondestructive evaluation have brought together experts from different parts of the world as reflected in this work The book is intended for engineers researchers and practitioners working in the area of electromagnetism **Non-Destructive Testing of Fibre-Reinforced Plastics Composites** J.
