Review of the Army's Technical Guides on Assessing and Managing Chemical Hazards to Deployed Personnel

National Research Council, Division on Earth and Life Studies, Board on Environmental Studies and Toxicology, Committee on Toxicology, Subcommittee on the Toxicological Risks to Deployed Military Personnel, 2004-08-03 To guide mission planning military decision makers need information on the health risks of potential exposures to individual soldiers and their potential impact on mission operations To help with the assessment of chemical hazards the U S Army Center for Health Promotion and Preventive Medicine developed three technical guides for characterizing chemicals in terms of their risks to the mission and to the health of the force The report reviews these guides for their scientific validity and conformance with current risk assessment practices The report finds that the military exposure guidelines are appropriate with some modification for providing force health protection but that for assessing mission risk a new set of exposure guidelines is needed that predict concentrations at which health effects would degrade the performance of enough soldiers to hinder mission accomplishment

recommends 1 hour and 24 hour emergency exposure guidance levels EEGs and 90 day continuous exposure guidance levels CEGs for acetaldehyde hydrogen chloride hydrogen fluoride hydrogen sulfide and propylene glycol dinitrate U.S. Army Medical Department Journal ,2010

Spacecraft Water Exposure Guidelines for Selected Contaminants National Research Council,Division on Earth and Life Studies,Board on Environmental Studies and Toxicology,Committee on Toxicology,Committee on Spacecraft Exposure Guidelines,2008-11-21 NASA maintains an active interest in the environmental conditions associated with living and working in spacecraft and identifying hazards that might adversely affect the health and well being of crew members Despite major engineering advances in controlling the spacecraft environment some water and air contamination is inevitable Several hundred chemical species are likely to be found in the closed environment of the spacecraft and as the frequency complexity and duration of human space flight increase identifying and

understanding significant health hazards will become more complicated and more critical for the success of the missions To protect space crews from contaminants in potable and hygiene water NASA requested that the National Research Council NRC provide guidance on how to develop water exposure guidelines and subsequently review NASA s development of the exposure guidelines for specific chemicals This book presents spacecraft water exposure guidelines SWEs for antimony benzene ethylene glycol methanol methyl ethyl ketone and propylene glycol Combined Exposures to Hydrogen Cyanide and Carbon Monoxide in Army Operations National Research Council,Division on Earth and Life Studies,Board on Environmental Studies and Toxicology,Committee on Toxicology,Committee on Combined Exposures to Hydrogen Cyanide and Carbon Monoxide in Army Operations,2008-01-28 In response to a request from the U S Army a committee convened by the National Research Council NRC conducted the first in a sequence of studies evaluating the combined health effects of low level exposure to two chemicals Army personnel are likely to be exposed to in firing tank weapons The Army sought information on whether the two chemicals hydrogen cyanide and carbon monoxide result in similar health impacts and should be assessed together when establishing exposure limits Based on a review of the scientific literature the report finds that the biochemical health impacts of the chemicals are similar and that the Army s proposed approach to setting exposure limits is appropriate Because previous research has focused on high exposures this initial NRC report recommends that further neurological studies at low concentrations of exposure to the chemicals be conducted Army R, D & A ,1983-03
