Trade Preference Erosion Bernard M. Hoekman, Will Martin, Carlos Alberto Primo Braga, 2009-04-15 The multilateral trade system rests on the principle of nondiscrimination Unilateral trade preferences granted by developed countries can help beneficiary countries but can create tensions between preferred developing countries typically beneficiaries from pre existing colonial regimes and other developing countries There is also concern about the potential erosion of these preferences through trade liberalization in the importing countries an issue that has been important in the current negotiations under the Doha Development Agenda of the World Trade Organization Trade Preference Erosion provides the information needed to make informed assessments of the benefits of trade preferences for developing countries the risks associated with the erosion of these benefits and policy options for dealing with these problems The authors provide detailed analyses of specific preference programs and undertake cross country disaggregated analyses of the impact of preferences at the product level Understanding the likely impacts of these programs and how those impacts are distributed is a precondition for formulating appropriate policy responses The authors argue that such responses need to go beyond trade policies and need to include a focus on enhancing the competitiveness and supply side capacity of developing countries This book is a useful and informative guide for policy makers non governmental organizations and others who wish to better understand the debate on the magnitude and impact of preference erosion

Adamczyk,Judy Simon,2019-10-10 *Associations between Reading and Mathematics: Genetic, Brain Imaging, Cognitive*

and Educational Perspectives Sarit Ashkenazi,Orly Rubinsten,Bert De Smedt,2017-10-05 Converging evidence demonstrates a strong link between reading and mathematics multiple cognitive processes are shared between reading and mathematics including the representation and retrieval of symbolic information attention working memory and cognitive control Additionally multiple brain networks are involved in both math and reading and last common genetic factors might influence both reading and math Hence it comes as no surprise that there are meaningful associations between aspects of math and reading abilities Moreover comorbidity rates between math learning disabilities MD and reading disabilities RD are high up to 66% and prevalence rate of the comorbid condition is reported to be more common than the prevalence rate of isolated math learning disabilities Accordingly the goal of the research topic is to explore the underline mechanisms of this overlap between reading and math The research topic aims to include the following topics Genetics it has been found that both RD and MD are based on genetic factors and run in families Moreover math problem solving shares significant genetic overlap with general cognitive ability and reading decoding whereas math fluency shares significant genetic overlap with reading fluency and general cognitive ability Hence this topic will explore the shared and unique genetic risk factors to RD and MD In addition to shared and unique genetic influence on reading and math Neural perspective converging evidence from both structural and multiple functional imaging studies involving a wide range of numerical tasks points to the intraparietal sulcus IPS as a core region that involve in quantity manipulation However several additional brain areas such as frontoparietal and temporoparietal areas were found to be involved in numerical tasks Individuals with MD show deficits in a distributed set of brain regions that include the IPS fusiform gyrus in posterior brain regions and pre frontal cortex regions Similarly converging evidence indicate that the left hemisphere regions centered in the fusiform gyrus temporoparietal cortex and pre frontal cortex regions are strongly involve in typical reading and present lower activity connectivity or abnormal structure in RD Thus there is a meaningful neural overlap between reading and math Hence the authors can submit empirical studies on the role of several of brain regions that are involved in math and reading commonality and diversity both in the typical and a

typical development Cognitive factors that play role in mathematics and reading and comorbidity between RD and MD There is a long lasting debate whether MD and RD originate from unique cognitive mechanisms or not Multiple cognitive processes are shared between reading and mathematics Therefore impairments in any one of domain general skills could conceivably play an important role in both pure and comorbid conditions Moreover it has been suggested that phonological processing has a significant role in some aspects of numerical processing such as retrieval of arithmetical facts Education it will be interesting to look at the effect of interventions that aim to improve reading such as phonological awareness and there transfer effect on improving mathematical processing Alternatively it will be good to test whether math interventions will improve reading
