Review Of Biological Research In Aging Vol 2:

Review of Biological Research in Aging Morton Rothstein, Vincent J. Cristofalo, 1987 **Annual Review of Gerontology and Geriatrics, Volume 10, 1990** Vincent J. Cristofalo, PhD, 1990-11-15 This volume presents a clear concise overview of the current state of knowledge about the biology of aging serving as both an invaluable graduate level text and a key reference for practicing professionals Over a dozen distinguished contributors probe the latest developments in our knowledge of why people age and how the process works These authoritative chapters are not just written for biologists but for gerontologists in general Marks the tenth anniversary of the Annual Review of Gerontology and Geriatrics

Non-Mammalian Models for Research on Aging F. A. Lints, 1985-11-26 [The Official Anti-Aging Revolution \(Volume 2 of 2\) \(EasyRead Comfort Edition\)](#) , **The Membrane Hypothesis of Aging** Imre Zs.-Nagy, 1994-07-12 The Membrane Hypothesis of Aging offers the most comprehensive multidisciplinary description of the cell maturation and aging process The membrane hypothesis of aging MHA described in this book is based on the actual multidisciplinary knowledge of cell morphology physiology and biochemistry The solid basis of known facts explains the destructive progressive intrinsic and universal character of the aging process The book interprets other aging theories including free radical theory of aging dysdifferentiation hypothesis of aging and cancer and the accumulation theories It presents important issues for future research The book also outlines the possibilities of an efficient preventive anti aging drug design and presents the first promising results of such research activity **Handbook of the Biology of Aging** Edward L. Schneider, John W. Rowe, 2013-10-22 Handbook of The Biology of Aging Third Edition provides a general overview to a wide scientific audience of some of the most important topics in biomedical gerontology The book discusses methodologies for biological aging studies and on animal models Protein modifications with aging special senses circadian rhythms and the adrenocortical axis are tackled in the book as well Gerontologists psychologists health care professionals and graduate students will find the book useful **Routledge Library Editions: Philosophy of Time** Various Authors, 2021-03-05 Reissuing five works originally published between 1937 and 1991 this collection contains books addressing the subject of time from a mostly philosophic point of view but also of interest to those in the science and mathematics worlds These texts are brought back into print in this small set of works addressing how we think about time the history of the philosophy of time the measurement of time theories of relativity and discussions of the wider thinking about time and space among other aspects One volume is a thorough bibliography collating references on the subject of time across many disciplines **Time: A Bibliographic Guide** Samuel L. Macey, 2018-10-10 Originally published in 1991 A multidisciplinary guide in the form of a bibliography of selected time related books and articles divided into 25 existing academic disciplines and about 100 subdisciplines which have a wide application to time studies **Aging, Sex, and DNA Repair** Bozzano G Luisa, 2012-12-02 Why organisms age and why sexual reproduction exists are major unsolved problems in biology This book provides an integrated explanation of aging and

sex based on current knowledge of DNA damage and repair Discusses the universality of the problem of DNA damage Describes aging as a consequence of accumulated DNA damage Considers meiosis as an adaptation for DNA repair Discusses mating in eukaryotes as an adaptation for masking mutation

Nonmammalian Animal Models for Biomedical Research Avril D. Woodhead, 1989-11-30 This book provides essential knowledge and information required to adequately assess useful alternatives from among the lower vertebrates and the invertebrates This volume highlights unfamiliar and underdeveloped organisms that have the potential to become very satisfactory surrogates for biomedical research A practical guide aimed at disseminating information to researchers about new models this work provides comparative biomedical studies at many levels of the phylogenetic ladder

Genetics and Evolution of Aging Michael R. Rose, Caleb E. Finch, 2013-03-09 Aging is one of those subjects that many biologists feel is largely unknown Therefore they often feel comfortable offering extremely facile generalizations that are either unsupported or directly refuted in the experimental literature Despite this unfortunate precedent aging is a very broad phenomenon that calls out for integration beyond the mere collecting together of results from disparate laboratory organisms With this in mind Part One offers several different synthetic perspectives The editors Rose and Finch provide a verbal synthesis of the field that deliberately attempts to look at aging from both sides the evolutionary and the molecular The articles by Charlesworth and Clark both provide population genetic perspectives on aging the former more mathematical the latter more experimental Bell takes a completely different approach arguing that aging may not be the result of evolutionary forces Bell's model instead proposes that aging could arise from the progressive deterioration of chronic host pathogen interactions This is the first detailed publication of this model It marks something of a return to the type of aging theories that predominated in the 1950s and 1960s theories like the somatic mutation and error catastrophe theories We hope that the reader will be interested by the contrast in views between the articles based on evolutionary theory and that of Bell

Endocrine Function and Aging H. James Armbricht, Rodney M. Coe, Nirandon Wongsurawat, 2013-12-21 One of the hallmarks of aging is the decreased capacity to adapt to changes in the environment In a constant controlled environment it is often difficult to distinguish the functioning of the young organism from that of the old However when stresses are applied temperature stresses dietary stresses infection emotional stresses the differences are more apparent Frequently the response of the old is delayed and may never reach the same magnitude as the young These responses in most cases are mediated by the neuroendocrine system which

communicates via hormones neurotransmitters and related substances Thus it is important to understand the age related changes that take place in the secretion and action of these substances and how these changes relate to the well being of the whole organism Indeed the neuroendocrine theory of aging proposes that almost all of the characteristics of aging can be accounted for by dysfunction of the neuroendocrine system A book on endocrine function and aging is particularly relevant at this time With the advent of the techniques of molecular biology there has been an explosion of knowledge concerning hormone secretion and action Hormones prohormones hormone receptors and second messenger mediators rapidly are being cloned and sequenced Such knowledge gives us important insights into the molecular workings of these substances as well as into the genetic basis of endocrine dysfunction These new tools are now being applied to the problem of age related changes in endocrine function *Special Focus on the Biology of Aging* Vincent J. Cristofalo, M. Powell Lawton, 2013-12-17

Annual Report National Institute on Aging, 1985 *Drosophila as a Model Organism for Ageing Studies* Frédéric A. Lints, M. Hani Soliman, 2013-11-21 Many books on ageing attempt to cover the whole field of gerontology However since gerontology is now such a diversified and rapidly expanding subject the results of such attempts tend to be either incomprehensible compendia or encyclopedias of disheartening size The present book aims to be both more modest and more ambitious It focuses on a single object *Drosophila* but attempts to offer a synthesis of all the gerontological work that has been done on it It also aims to show the extent to which this work has led to an understanding of the biological phenomena of ageing longevity senescence and death in higher organisms including man Finally it attempts on the basis of current knowledge to mark out the paths that the next generation of researchers will most probably follow *Drosophila* has been used as a model organism to advance our basic knowledge of the fundamentals of genetics and gerontology It may be noted that the pioneering work on the genetics of ageing which used *Drosophila* began very early in this century within the first decade of the rediscovery of Mendel's laws *Journal of the American Dietetic Association*, 1986 **Scientific Report**, 1984
