Reviews of Plasma Physics M. A. Leontovich, 1997-01-14 In the interest of speed and economy the notation of the original text has been retained so that the cross product of two vectors A and B is denoted by AB the dot product by AB the Laplacian operator by Δ etc It might also be worth pointing out that the temperature is frequently expressed in energy units in the Soviet literature so that the Boltzmann constant will be missing in various familiar expressions In matters of terminology whenever possible several forms are used when a term is first introduced e g magnetoacoustic and magnetosonic waves probkotron and mirror machine etc It is hoped in this way to help the reader to relate the terms used here with those in existing translations and with the conventional nomenclature In general in the bibliographies when a translated version of a given citation is available only the English translation is cited unless reference is made to a specific portion of the Russian version Except for the correction of some obvious misprints the text is that of the original We wish to express our gratitude to Academician Leontovich for kindly providing the latest corrections and additions to the Russian text and especially for some new material which appears for the first time in the American edition v CONTENTS Chapter 1 PLASMA CONFINEMENT IN CLOSED MAGNETIC SYSTEMS L S Solov'ev and V D Shafranov 1 1 Introduction 1 2 General Properties of Toroidal Configurations
