Water Management Great Britain: Parliament: House of Lords: Science and Technology Committee, 2006-06-06 The Committee's report examines a range of issues relating to water management in England and Wales including the regulatory and legislative framework water demand and supply issues water efficiency and environmental aspects including the Water Framework Directive Amongst the 60 conclusions and recommendations made the Committee finds that a sustainable balance between water resource development and demand management cannot be achieved until there is a co-ordinated institutional framework for water resource management with a need for wider stakeholder engagement by means of new regional boards consisting of environmental and consumer interests as well as Ofwat representatives Ofwat and the Environment Agency should take a more realistic approach to long term planning issues including agreeing indicative pricing for each water company Current levels of leakage from the distribution network are unacceptably high in parts of the country which damages the public's attitude towards sensible water use and Ofwat should sanction water companies to spend more on reducing leakage with targets that take greater account of environmental and social factors as well as economics The Government should make it easier for water companies to impose water meters on households in the driest parts of the country in order to help reduce demand and ensure fairer charging practices with support through the tax and benefit system for vulnerable customers who have difficulty with their bills In order to address the very high level of unpaid water bills those people who can afford to pay but refuse to do so should be partially disconnected from the water supply

Water Resources and Environment Miklas Scholz, 2015-11-17 The 2015 International Conference on Water Resource and Environment WRE2015 aims to provide a platform where scholars from different countries can exchange ideas opinions and views This book is divided into four main themes 1 Hydrology and water resources 2 Water pollution 3 Water treatment methods and 4 Freshwater ecosystems

Exploring to Gender and Tourism Sustainability Claudia Eger, Ana María Munar, Cathy H.C. Hsu, 2023-03-21 This book examines the relationship between gender and sustainability in tourism Whilst an extensive body of work exists in the areas of gender and sustainability these two fields of knowledge are seldom combined to examine tourism phenomena When we look at the evolution of tourism we see that sustainability has become an essential element in educational programmes policy making and strategic considerations for organisations and destinations Whilst the beginnings of tourism sustainability were challenging presently its relevance is seldom questioned However this situation is not the case with gender research Although gender theorising and research have existed for over a century and a rich legacy of knowledge exists on this topic meaningful and respectful engagement with this line of scholarship is thus far peripheral in tourism studies The aim of this book is to reflect on and rethink the intersection of gender and tourism sustainability through the lens of gender theory and feminist epistemology to stay with the trouble and devise pathways for sustainability gender knowledge This book will be of

great interest to students researchers and academics in tourism gender and sustainability as well as tourism management The chapters in this book were originally published as a special issue of the Journal of Sustainable Tourism
