Messaging for Engineering National Academy of Engineering,Committee on Implementing Engineering Messages,2013-06-21 For those in the broad engineering community those who employ work with and or educate engineers and engineers themselves there is no need to explain the importance and value of engineering They understand that engineers help make the world a better place for all that they regularly grapple with important societal and environmental issues and that the engineering process is every bit as creative as composing a symphony or crafting a piece of art But the situation outside the engineering community is quite different Studies have shown that most K 12 students and teachers have a limited appreciation of all the ways that engineering makes their lives better and furthermore that they have little understanding of what engineers do or of the opportunities that an engineering education offers Messaging for Engineering supports efforts by the engineering community to communicate more effectively about the profession and those who practice it This report builds on the 2008 NAE publication Changing the Conversation Messages for Improving Public Understanding of Engineering CTC which presented the results of a research based effort to develop and test new more effective messages about engineering The new messages cast engineering as inherently creative and concerned with human welfare as well as an emotionally satisfying calling This report summarizes progress in implementing the CTC messages but also recognizes that there is potential to galvanize additional action and thus suggests specific steps for major players in the engineering community to continue and build on progress to date Many of the report s recommendations resulted from discussion at a December 2010 committee workshop that involved several dozen high level decision makers representing key stakeholder groups in the engineering community

Engineering in Pre-College Settings Şenay Purzer,Johannes Strobel,Monica E. Cardella,2014-11-15 In science technology engineering and mathematics STEM education in pre college engineering is not the silent e anymore There is an accelerated interest in teaching engineering in all grade levels Structured engineering programs are emerging in schools as well as in out of school settings Over the last ten years the number of states in the US including engineering in their K 12 standards has tripled and this trend will continue to grow with the adoption of the Next

Generation Science Standards The interest in pre college engineering education stems from three different motivations First from a workforce pipeline or pathway perspective researchers and practitioners are interested in understanding precursors influential and motivational factors and the progression of engineering thinking Second from a general societal perspective technological literacy and understanding of the role of engineering and technology is becoming increasingly important for the general populace and it is more imperative to foster this understanding from a younger age Third from a STEM integration and education perspective engineering processes are used as a context to teach science and math concepts This book addresses each of these motivations and the diverse means used to engage with them Designed to be a source of background and inspiration for researchers and practitioners alike this volume includes contributions on policy synthesis studies and research studies to catalyze and inform current efforts to improve pre college engineering education The book explores teacher learning and practices as well as how student learning occurs in both formal settings such as classrooms and informal settings such as homes and museums This volume also includes chapters on assessing design and creativity

Interdisciplinarity, Creativity, and Learning Bharath Sriraman, Viktor Freiman, Nicole Lirette-Pitre, 2009-06-01

Interdisciplinarity is increasingly viewed as a necessary ingredient in the training of future oriented 21st century disciplines that rely on both analytic and synthetic abilities across disciplines Nearly every curricular document or vision statement of schools and universities include a call for promoting creativity in students Yet the construct of creativity and giftedness across disciplines remains elusive in the sense that the prototypical examples of such work come from eminent scientists artists and mathematicians and little if any work has been conducted with non eminent individuals This monograph is an attempt to fill this gap by putting forth the view that interdisciplinarity and creativity are related constructs and that the cultivation of domain general creativity is possible Mathematics has historically been anchored to numerous disciplines like theology natural philosophy culture and art allowing for a flexibility of thought that is difficult to cultivate in other disciplines In this monograph the numerous chapters from Australia U S A Canada Cyprus Denmark and Japan provide a compelling illustration of the intricate connection of mathematics with literature paradoxes history technology and modeling thus serving as a conduit for interdisciplinarity creativity and learning to occur

Progress Towards the Knowledge Driven Economy Great Britain. Parliament. House of Commons. Trade and Industry Committee, 2005 The 1998 White Paper Our competitive future building the knowledge based economy CM 4176 ISBN 0101417624 proposed a ten year programme to enable the UK to close the productivity gap by exploiting the potential benefits of a modern knowledge driven economy More than six years on this report is a review of the progress that has been made The topics covered include UK performance since 1998 the development of new products processes and services science and knowledge research bases knowledge transfer and exploitation information and communication technologies competition from low cost economies One of the conclusions is that although the UK s science and knowledge research bases and businesses are collaborating more frequently the performance in knowledge exploitation has been disappointing and the relative position of the UK against the rest of the G7 has remained unchanged Another

conclusion is that although there is some evidence that outsourcing abroad can be beneficial the Government should keep the trend under review in case there are strategic losses
