dissolution including uniform attack 2 electrochemical corrosion from either metallurgical or environmental cells and 3 corrosive mechanical interactions It seems more logical to group corrosion according to mechanisms than to arbitrarily separate them into 8 or 20 different types of corrosion as if they were unrelated University students and industry personnel alike generally are afraid of chemistry and consequently approach corrosion theory very hesitantly In this text the electrochemical reactions responsible for corrosion are summed up in only five simple half cell reactions When these are combined on a polarization diagram which is explained in detail the electrochemical processes become obvious
