*Value Management in Healthcare* Nathan William Tierney, 2017-10-06 Nathan Tierney's powerful storytelling is rarely seen in today's health care business environment. We must redesign the health care delivery system a team sport in service of patients, hold it accountable with measurement to improve outcomes and quantify the resource costs over the full cycle of care. Value based health care is a framework through which these goals are achieved and Tierney provides a detailed playbook to get your organization there. Outlined in incredible detail and clarity, he presents core concepts and dives into the key metrics needed to build, maintain, and scale a successful value based health care organization. Nathan shares a realistic vision of what any CEO should expect when developing their own Value Management Office. Nothing is more important to me than improving the lives of those I love. My personal mission is to create systemic change with an impact on the global stage. This playbook needs to be on the desk of every executive, clinician, and patient today. Mahek Shah, MD, Senior Researcher and Senior Project Leader, Harvard Business School. Our current healthcare system is broken. The Organization for Economic Cooperation and Development (OECD) predicts health care costs could increase from 6% to 14% of GDP by 2060. The cause of this increase is due to 1) a global aging population, 2) growing affluence, 3) rise in chronic diseases, and 4) better informed patients, all of which raise the demand for healthcare. In 2006, Michael Porter and Elizabeth Teisberg authored the book *Redefining Health Care: Creating Value Based Competition on Results*. In it, they present their analysis of the root causes plaguing the health care industry and make the case for why providers, suppliers, consumers, and employers should move towards a patient-centric approach that optimizes value for patients. According to Porter, value for patients should be the overarching principle for our broken system. Since 2006, Professor Porter, accompanied by his esteemed Harvard colleague Professor Robert Kaplan, have worked tirelessly to promote this new approach and pilot it with leading healthcare delivery organizations like Cleveland Clinic, Mayo Clinic, MD Anderson, and U.S. Department of Veteran Affairs. Given the current state of global healthcare, there is urgency to achieve widespread adoption of this new approach. The intent of this book is to equip all healthcare delivery organizations with a guide for putting the value based concept into practice. This book defines the practice of value based health care as Value Management. The book explores Professor Porter's Value Equation: Value = Outcomes / Cost, which is central to Value Management and provides a step-by-step process for how to calculate the components of this equation. On the outcomes side, the book presents the Value Realization Framework, which translates organizational mission and strategy into a comprehensive set of performance measures and contextualizes the measures for healthcare delivery. The Value Realization Framework is based on Professor Kaplan's ground-breaking Balanced Scorecard approach but specific to healthcare organizations. On the costs side, the book details the Harvard-endorsed time-driven activity-based costing (TDABC) methodology, which has proven to be a modern catalyst for defining HDO costs. Finally, this book covers the need and a plan to establish a Value Management Office to lead the delivery transformation and govern operations. This book is designed in a format where any organization can read it and acquire the fundamentals and methodologies of

Value Management It is intended for healthcare delivery organizations in need of learning the specifics of achieving the implementation of value based healthcare

**Business to Business Marketing Management** Alan Zimmerman,Jim Blythe,2017-09-25 Business to business markets are considerably more challenging than consumer markets and as such demand a more specific skillset from marketers

Buyers with a responsibility to their company and specialist product knowledge are more demanding than the average consumer. Given that the products themselves may be highly complex, this often requires a sophisticated buyer to understand them. Increasingly, B2B relationships are conducted within a global context. However, all textbooks are region specific despite this growing move towards global business relationships, except this one. This textbook takes a global viewpoint with the help of an international author team and cases from across the globe. Other unique features of this insightful study include placement of B2B in a strategic marketing setting, full discussion of strategy in a global setting including hypercompetition, full chapter on ethics and CSR early in the text, and detailed review of global B2B services, marketing, trade shows, and market research. This new edition has been fully revised and updated with a full set of brand new case studies and features, expanded sections on digital issues, CRM, and social media, as well as personal selling. More selective, shorter, and easier to read than other B2B textbooks, this is ideal for introduction to B2B and shorter courses. Yet it is comprehensive enough to cover all the aspects of B2B marketing any marketer needs, be they students or practitioners looking to improve their knowledge.

An Introduction to Enterprise Architecture is the culmination of several decades of experience that I have gained through work initially as an information technology manager and then as a consultant to executives in the public and private sectors. I wrote this book for three major reasons: 1) to help move business and technology planning from a

systems and process level view to a more strategy driven enterprise level view 2 to promote and explain the emerging profession of EA and 3 to provide the first textbook on the subject of EA which is suitable for graduate and undergraduate levels of study To date other books on EA have been practitioner books not specifically oriented toward a student who may be learning the subject with little to no previous exposure Therefore this book contains references to related academic research and industry best practices as well as my own observations about potential future practices and the direction of this emerging profession

**Value Management** Roger H. Davies, 2016-02-17 Change programmes in both private and public sectors have a poor record of delivering their intended value The reasons given most often for their failure include lack of executive support or buy in from key users loose requirements definition weak programme management and plain wishful thinking They rarely include technical limitations Value Management puts forward the view that the true problem lies in failing to understand the causal links between the intended stakeholder outcomes and the actual programme outputs Repeating the pattern of failure can be avoided by asking two questions Before implementation what capabilities must a change programme deliver when and in what order so as to cause intended value against a defined purpose with speed and certainty During and after implementation what minor adjustments and or major shifts are needed to be certain that the programme remains on purpose and on value and two answers to be given Target time and align change programmes to deliver maximum intended value to stakeholders the baseline business case track and respond to changes during and beyond implementation to ensure that the programme actually delivers or exceeds intended value value realisation The authors show how by asking and answering these questions direction and delivery of any programme can be clarified and greater economic value achieved
