**Rapidly Quenched Metals** S Steeb, 2012-12-02 Rapidly Quenched Metals Volume I covers the proceedings of the Fifth International Conference on Rapidly Quenched Metals held in Wurzburg Germany on September 3-7 1984. The book focuses on amorphous and crystalline metals formed by rapid quenching from the melt. The selection first covers the scope and trends of developments in rapid solidification technology: rapid solidification and undercooling of liquid metals by rapid quenching. Discussions focus on experimental methods: powders, strip, particulate production, consolidation, and alloys and alloy systems. The text then examines the solidification of undercooled liquid alloys entrapped in solid crystallization kinetics in undercooled droplets and grain refinement in bulk undercooled alloys. The manuscript tackles the undercooling of niobium-germanium alloys in a 100 meter drop tube, influence of process parameters on the cooling rate of the melt spinning process, and the mechanism of ribbon formation in melt spun copper and copper-zirconium. The formation and structure of thick sections of rapidly solidified material by incremental deposition and production of ultrafine dispersions of rare earth oxides in Ti alloys using rapid solidification are also mentioned. The selection is a valuable reference for physicists, chemists, physical metallurgists, and engineers.

**Bulk Metallic Glasses** C. Suryanarayana, A. Inoue, 2017-11-22 Reflecting the fast pace of research in the field, the Second Edition of Bulk Metallic Glasses has been thoroughly updated and remains essential reading on the subject. It incorporates major advances in glass forming ability, corrosion behavior, and mechanical properties. Several of the newly proposed criteria to predict the glass forming ability of alloys have been discussed. All other areas covered in this book have been updated with special emphasis on topics where significant advances have occurred. These include processing of hierarchical surface structures and synthesis of nanophase composites using the chemical behavior of bulk metallic glasses and the development of novel bulk metallic glasses with high strength and high ductility and superelastic behavior. New topics such as high entropy bulk metallic glasses, nanoporous alloys, novel nanocrystalline alloys, and soft magnetic glassy alloys with high saturation magnetization have also been discussed. Novel applications such as metallic glassy screw bolts, surface coatings, hyperthermia glasses, ultra-thin mirrors, and pressure sensors, mobile phone casing, and degradable biomedical materials are described. Authored by the world's foremost experts on bulk metallic glasses, this new edition endures as an indispensable reference and continues to be a one-stop resource on all aspects of bulk metallic glasses.

**1990 Lectures In Complex Systems** Lynn Nadel, Daniel I. Stein, 2018-10-08 An excellent series presenting top lecturers from the best institute for complex systems. Topics covered include stochastic processes, fluid flow, pattern formation, information-based complexity, motor system problems, and the nature of adaptive change. *Rapidly Quenched Metals 6: Volume 2* R.W.
