Bulk Metallic Glasses C. Suryanarayana, A. Inoue, 2011-06-03 In spite of the large amount of research activity in this subfield of materials science and engineering there is no single book available that provides background information methods of synthesis characterization procedures properties and potential and existing applications of bulk metallic glasses Written in an easy to understand style by pioneering researchers in this field Bulk Metallic Glasses is one of the first books to coherently discuss the synthesis processing properties and applications of these unique materials The book explores the differences between nanocrystalline glassy and amorphous solids as well as the thermodynamics and kinetics and various processing methods of glass formation It critically compares the different criteria for glass formation describes the advantages and limitations of experimental methods for synthesizing bulk metallic glasses in assorted sizes and shapes and examines the kinetics of crystallization devitrification and the mechanisms of transformations It also covers the density diffusivity thermal expansion electrical resistivity specific heat viscosity corrosion resistance mechanical behavior and magnetic properties of bulk metallic glasses After presenting a wide array of applications the book concludes with a discussion on the future of these materials The adoption of bulk metallic glasses into existing systems is besieged by many obstacles but due to their interesting combination of properties future applications may be unlimited A one stop resource on all aspects of bulk metallic glasses this book demonstrates the immense potential of these novel materials It clearly

elucidates the background detailed methods of synthesis and characterization structure and properties of bulk metallic glasses

Non-equilibrium Processing of Materials C. Suryanarayana, 1999-07-22 The rapid technological developments during the later half of the 20th century have demanded materials that are stronger capable of use at much higher temperatures more corrosion resistant and much less expensive than those currently used These demands become even more significant on the threshold of the new century and the millennium Significant improvements in properties can only be achieved by processing the materials under far from equilibrium or non equilibrium conditions Several new processing technologies have been developed during the past few decades including rapid solidification spray forming mechanical alloying ion mixing vapor deposition laser processing and plasma processing Remarkable advances have been made in recent years in the science and technology of these processes used to synthesize characterize and apply these materials processed under non equilibrium conditions Some of these techniques have evolved from laboratory curiosity to commercial scale manufacturing in just a few years In other cases industrial necessity prompted development of the technology and the science followed later The chapters in this book have been written by people who are world recognized experts in their respective fields Each chapter describes the principles processing techniques special features of the materials produced and their applications An extensive list of references is provided at the end of each chapter that will facilitate location of
