Raptors Keith L. Bildstein, 2017-05-02 Raptors are formally classified into five families and include birds such as eagles ospreys kites true hawks buzzards harriers vultures and falcons that are familiar and recognized by many observers These diurnal birds of prey

are found on every continent except Antarctica and can thrive in seemingly inhospitable spots such as deserts and the tundra. They have powerful talons and hooked beaks for cutting and tearing meat and keen binocular vision to aid in their hunting prowess. Because of their large size, distinctive feeding habits, and long distance flight patterns, raptors intrigue humans and have been the subject of much general interest as well as extensive scientific research. Keith L. Bildstein has watched and studied raptors on five continents and is well prepared to explain their critical importance not only as ecological entities but also as inspirational tokens across natural and human dominated landscapes. His book offers a comprehensive and accessible account of raptors including their evolutionary history, their relationships to other groups of birds, their sensory abilities, their general natural history, their breeding ecology, and feeding behavior, and threats to their survival in a human dominated world. Biologically sound but readable, *Raptors* is a nontechnical overview of this captivating group. It will allow naturalists, birders, hawk watchers, science educators, schoolchildren, and the general public, along with new students in the field of raptor biology, to understand and appreciate these birds and in so doing, better protect them.

Birds of Prey José Hernán Sarasola, Juan Manuel Grande, Juan José Negro, 2018-06-30. This book will provide the state of the art on most of the topics involved in the ecology and conservation of birds of prey. With chapters authored by the most recognized and prestigious researchers on each of the fields, this book will become an authorized reference volume for raptor biologists and researchers around the world.

Flight Identification of Raptors of Europe, North Africa and the Middle East Dick Forsman, 2016-02-25. This book is the ultimate flight identification guide for the raptors of the Western Palearctic covering Europe, North Africa, the Middle East, including Arabia, to Central Asia. Raptors are notoriously hard to identify even if seen well and represent perhaps the toughest of all ID challenges for birders. This guide provides identification information for all 60 species that regularly occur in the region to subspecific level. The text covers every plumage and age in detail, with each species account accompanied by a range of photographs covering all the principal plumages. Based on this stunning photographic coverage, most of which has never been published before, this book represents a landmark in bird identification books and a major work for all raptor enthusiasts.

Trees of Panama and

Costa Rica Richard Condit, Rolando A. Pérez, Nefertaris Daguerre, 2010-11-08 This is the first field guide dedicated to the diverse tree species of Panama and Costa Rica. Featuring close to 500 tropical tree species, *Trees of Panama and Costa Rica* includes superb color photos, abundant color distribution maps, and concise descriptions of key characteristics, making this guide readily accessible to botanists, biologists, and casual nature lovers alike. The invaluable introductory chapters discuss tree diversity in Central America and the basics of tree identification. Family and species accounts are treated alphabetically and describe family size, number of genera and species, floral characteristics, and relative abundance. Color distribution maps supplement the useful species descriptions, and facing page photographic plates detail bark, leaf, flower, or fruit of the species featured. Helpful appendices contain a full glossary, a comprehensive guide to leaf forms, and a list of families not covered. The only tree guide to cover both Panama and Costa Rica together. Covers almost 500 species, 438 high resolution color photos, 480 color distribution maps, and two general maps. Concise and jargon-free descriptions of key characteristics for every species. Full glossary and guide to leaf forms included.

Raptors of New Mexico Jean-Luc E. Cartron, 2010-08-16 No book has ever before specifically focused on the birds of prey of New Mexico. Both Florence Bailey (1928) and J. Stokley Ligon (1961) published volumes on the birds of New Mexico, but their coverage of raptors was somewhat limited. In the ensuing years, a great deal of new information has been collected on these mighty hunters: distribution, ecology, and conservation, including in New Mexico. The book begins with a history of the word raptor. The order of Raptatores or Raptores was first used to classify birds of prey in the early nineteenth century, derived from the Latin word raptor, one who seizes by force. The text then includes the writings of thirty-seven contributing authors who relate their observations on these regal species. For example, Joe Truett recounts the following in the chapter on the Swainson's Hawk: "From spring to fall, each year at the Jornada Caves in the Jornada del Muerto, Swainson's hawks assemble daily to catch bats. The bats exit the caves through lava tubes near sundown. The hawks swoop in, snatch bats from the air, and eat them on the wing." Originally from France, Jean-Luc Cartron has lived and worked on several continents, finding his passion in the wide open spaces of New Mexico. He became fascinated by the birds of prey and has studied their ecology and conservation for nearly twenty years. *Raptors of New Mexico* will provide readers with a comprehensive treatment of all hawks, eagles, kites, vultures, falcons, and owls breeding or wintering in New Mexico or simply migrating through the state. This landmark study is also beautifully illustrated with more than six hundred photographs, including the work of more than one hundred photographers and more than twenty species distribution maps.
