led us to collect such data as were already in the literature and also led us to make further investigations. The facts gathered in this way have proved useful to us and are here presented in the hope that they will be useful to others also. The plan of the presentation is simple. An introduction treats of the rat as a laboratory animal, indicates the methods of gathering the data, and also gives examples of our use of the tables. This is followed by an outline of the classification of the common rats and by a brief statement of the history of the rat since it arrived in western Europe. The rest of the book falls into two parts. The first part deals with the domesticated albino rat, concerning which we have the larger amount of information. The second part deals in a similar way with the wild Norway rat, the form from which the Albino has been derived. In connection with each part, the several reference tables and the formulas employed for them, and for the corresponding graphs, are given, and at the end of the book a list of papers on the rat is added. In the two parts which form the body of the book, the purpose is to present for the rat under normal conditions the fundamental observations giving data and conclusions only. It is hardly necessary to add that in most directions our information is fragmentary. About the Publisher: Forgotten Books publishes hundreds of thousands of rare and classic books.
