Rate-Controlled Separations P.C. Wankat,2012-04-18

Separations have always been very important in chemical engineering This importance has recently escalated with the imminent emergence of new industries in biotechnology and high performance materials Separations will continue to remain important in bulk chemical manufacturing petroleum processing and the other standard areas of chemical engineering interest The development of new industries requiring the expertise of chemical engineers leads to problems and opportunities for chemical engineering education Chemical engineering students need to be prepared for both the known future and the unknown future The known future includes the use of standard chemical engineering separation methods such as distillation and absorption which will remain important for many years The unknown future involves the use of many relatively new separation methods such as adsorption chromatography electrophoresis membrane separations A major question for chemical engineering education is what to teach In the area of separations my personal answer has been to require undergraduates to study classical separations including distillation adsorption and extraction Then an elective course on newer methods which require a mass transfer analysis should be made available to seniors and graduate students I would not mind if this second course were required of graduate students certainly that would be preferable to an additional distillation course My first book *Equilibrium Staged Separations* was my response for the required undergraduate course This book is my response to both the proposed second course and to practicing chemical engineers who missed this material when they were in school *Rate-Controlled Separations* Wankat,2005-01-01

proceedings will be a major reference document to the scientific and industrial community and will contribute to the progress in Computer Aided Process Engineering Handbook of Food Processing Equipment George D.

Saravacos, Athanasios E. Kostaropoulos, 2012-12-06 Recent publications in food engineering concern mainly food process engineering which is related to chemical engineering and deals primarily with unit operations and unit processes as applied to the wide variety of food processing operations. Relatively less attention is paid to the design and operation of food processing equipment which is necessary to carry out all of the food processes in the food plant. Significant technical advances on processing equipment have been made by the manufacturers as evidenced by the efficient modern food processing plants. There is a need to relate advances in process engineering to process equipment and vice versa. This book is an attempt to apply the established principles of transport phenomena and unit operations to the design, selection and operation of food processing equipment. Since food processing equipment is still designed empirically due to the complexity of the processes and the uncertainty of food properties, description of some typical industrial units is necessary to understand the operating characteristics. Approximate values and data are used for illustrative purposes since there is an understandable lack of published industrial data. **Chiral Separations By Liquid Chromatography And Related Technologies** Hassan Y.

Aboul-Enein, Imran Ali, 2003-06-03 Unique in its systematic and detailed description of the various types, structures and properties of chiral stationary phases (CSPs) and their preparation, application and future scope, this volume highlights an assortment of liquid chromatographic approaches including sub and super critical fluid chromatography, capillary electrochromatography. Separation and Purification Technologies in Biorefineries Shri Ramaswamy, Hua-Jiang Huang, Bandaru V. Ramarao, 2013-02-04 Separation and purification processes play a critical role in biorefineries and their optimal selection, design and operation to maximise product yields and improve overall process efficiency. Separations and purifications are necessary for upstream processes as well as in maximising and improving product recovery in downstream processes. These processes account for a significant fraction of the total capital and operating costs and also are highly energy intensive. Consequently, a better understanding of separation and purification processes, current and possible alternative and novel advanced methods is essential for achieving the overall techno-economic feasibility and commercial success of sustainable biorefineries. This book presents a comprehensive overview focused specifically on the present state, future challenges and opportunities for separation and purification methods and technologies in biorefineries. Topics covered include Equilibrium Separations, Distillation, liquid-liquid extraction and supercritical fluid extraction, Affinity Based Separations, Adsorption, ion exchange and simulated moving bed technologies, Membrane Based Separations, Microfiltration, ultrafiltration and diafiltration, nanofiltration, membrane pervaporation and membrane distillation, Solid-liquid Separations, Conventional filtration and solid-liquid extraction, Hybrid Integrated Reaction Separation Systems, Membrane bioreactors, extractive fermentation, reactive distillation and reactive absorption. For each of these processes, the fundamental principles

and design aspects are presented followed by a detailed discussion and specific examples of applications in biorefineries Each chapter also considers the market needs industrial challenges future opportunities and economic importance of the separation and purification methods The book concludes with a series of detailed case studies including cellulosic bioethanol production extraction of algae oil from microalgae and production of biopolymers Separation and Purification Technologies in Biorefineries is an essential resource for scientists and engineers as well as researchers and academics working in the broader conventional and emerging bio based products industry including biomaterials biochemicals biofuels and bioenergy
