Mead's Concept of Rationality** W. Kang, 2019-07-22 No detailed description available for G H Mead s Concept of Rationality Perspectives in Group Psychotherapy (RLE: Group Therapy) P.B. de Maré, 2014-09-19 This book originally published in 1972 aimed to provide a theoretical framework for group therapists to guide them through the mass of variables which beset them Its scope therefore is extremely broad for it also touches on philosophy psychology sociology communication and general systems theory In the last chapter certain conclusions are drawn concerning the relationship between group and psycho dynamics The book will be of interest to those who have already had some experience of small medium or large groups and who want to think about their work in more general terms it was not at the time widely realised how radically different and how potentially powerful are the implications of group procedures not only for therapy but in such fields as education industry and politics Freud recognised this when he pointed out the dilemma of having to procure for the group precisely those features which were characteristic of the individual and which are extinguished in him by the formation of the group Whilst the problem for the individual is the intrusion of unconscious factors for the group it is the group s equivalent of consciousness namely communication and organization which is in a quandary The group model differs crucially from the psychological but they may relate in the sense that as Freud indicated neurosis represents a recapitulation within the individual of mankind s group history The unconscious mind then is a group phenomenon In other words group theory turns psychoanalysis upside down and begins at the point where Freud left off relating neurosis to its social sources In the light of the group approach therefore neurosis and certain of the psychoses can be viewed as localized deposits of unresolved group experiences within the individual whether they be past current or an expectation of the future a feature which makes traumatic neuroses more understandable since they cannot be explained in terms of infantile neurosis The author suggested the possibility of a new development in group techniques namely that of large group therapy freed of community ties or training considerations in which attitudes and ideologies make themselves evident not as cloudy idealistic non sequiturs but as crucial and clearly definable climates which either impede or promote communication and the flow of information *Relational Communication* L. Berger,2020-07-24 In an earlier era the communication field was dominated by the study of mediated and unmediated message effects during which considerable research focused on the attitudinal and action consequences of exposure to messages A more catholic purview of the communication process exists today This more encompassing perspective does not deny the importance of studying message effects but raises the additional question of how individuals generate messages in the first place While the earlier era of communication research was dominated by studies that focused on attitude and behavior change as primary dependent variables such variables as message comprehension have begun to emerge in this new era The focus on communication and cognition has led paradoxically to a more intense focus on social interaction processes The theory and research presented in this volume seeks to strike a balance between the internal workings of the individual cognitive system on the one hand and the outer world of social interaction on the other Whether or not the theory and research stands the test of time it is clear that complete cognitive accounts of social interaction cannot confine themselves to mere descriptions of the cognitive structures and processes that are responsible for message production and comprehension Explicit links must be made between these cognitive structures and processes and the workings of social interaction This work takes a modest step in that direction      *Principle Concepts of Technology and Innovation Management: Critical Research Models* Friedman, Robert S.,Roberts, Desiree M.,Linton, Jonathan D.,2008-09-30 This book is a reference guide to the theory and research supporting the field of Technology and Innovation Management Provided by publisher
