Short Term Anxiety Provoking Psychotherapy A Treatment Manual:

Short-term Anxiety-provoking Psychotherapy Peter E. Sifneos, 1992-05-04 Short Term Anxiety Provoking Psychotherapy STAPP is the oldest systematically studied type of brief psychotherapy in the United States Developed in the 1950s by Peter Sifneos it has become increasingly popular in recent years Mental health professionals in Europe and the Americas have flocked to Sifneos s workshops seminars and lectures Now at last in response to numerous requests for information Sifneos has compiled this step by step guide to his method STAPP represents a distillation of traditional psychoanalytic techniques tapping the patient s ability both to establish a transference relationship with the therapist and to understand the roots of psychological conflicts Although designed to help relatively healthy people with a single circumscribed emotional problem STAPP gives patients the tools for dealing with future problems after therapy has terminated The short term in STAPP usually represents several months and rarely exceeds a year a time span that not only eases the financial burden but contributes to the likelihood that the patient will complete the course of therapy The anxiety provoking component Sifneos says reflects the therapist s role as a teacher an objective person who raises questions that wouldn t have occurred to the patient precisely because they are anxiety inducing With its rich clinical material this manual provides innumerable examples of new options available to therapists enlarging and enriching their therapeutic armamentarium **BOOK JACKET Title** Summary field provided by Blackwell North America Inc All Rights Reserved

Core Processes in Brief Psychodynamic Psychotherapy Denise P. Charman, 2003-10-03 Many students enter graduate programs with little or no experience of psychodynamic psychotherapy Efforts to impart clinical skills have often been less than systematic and beginning psychotherapists have not always been encouraged to think about what they are doing and why they are doing it from a scientific standpoint Thoughtfully building on current debates over

efficacy and effectiveness this book outlines a promising approach to training in which the work of therapy is divided into tasks patterned after Luborsky's influential delineation of curative factors significant developments in the course of the therapy that are crucial for effective change Each task step for the therapist cognitive behavioral affective or a combination is analyzed taught separately and then put in sequence with the other task steps Curative factors have been extensively studied in recent years and the approach rests on a solid empirical base In a climate of increased accountability clinicians must demonstrate that they are responding to providers requests to conduct evidence based practices Core Processes in Brief Psychodynamic Psychotherapy will be an invaluable resource not only for students and trainees but for established therapists who find themselves asked to justify their work
