*Philip José Farmer's The Dungeon Vol. 2* Bruce Coville, 2016-06-30 Philip Jos Farmer bestselling author of RIVERWORLD introduces the second volume of fantastic adventure within the walls of THE DUNGEON Nobody comes here by accident Descending into the depths of an unknown planet Clive Folliot and his band of heroes struggle to survive the traps of a strange multi leveled prison None of the intrepid characters from the far reaches of time and space know how or why they landed in the confines of the Dungeon or how they may escape Their only clues to the intrigues of the Dungeon appear briefly in the journal of Clive's lost twin Neville In this fantastic abyss of serpents and spiders aliens and cyborgs Clive and his companions continue the quest for Neville and for a way home THE DARK ABYSS by Bruce Coville With fantastic illustrations by Robert Gould winner of the World Fantasy Award **"Shrieks and Crashes."** Wilfred Brenton Kerr, 1929 *Schlock Quarterly: Volume 3, Issue 2* Rogue Planet Press, Morse Homology with Differential Graded Coefficients Jean-François Barraud, Mihai Damian, Vincent Humilière, Alexandru Oancea, 2025-05-29 The key geometric objects underlying Morse homology are the moduli spaces of connecting gradient trajectories between critical points of a Morse function The basic question in this context is the following How much of the topology of the underlying manifold is visible using moduli spaces of connecting trajectories The answer provided by classical Morse homology as developed over the last 35 years is that the moduli spaces of isolated connecting gradient trajectories recover the chain homotopy type of the singular chain complex The purpose of this monograph is to extend this further the fundamental classes of the compactified moduli spaces of connecting gradient trajectories allow the construction of a twisting cocycle akin to Brown's universal twisting cocycle As a consequence the authors define and compute Morse homology with coefficients in any differential graded DG local system As particular cases of their construction they retrieve the singular homology of the total space of Hurewicz fibrations and the usual Morse homology with local coefficients A full theory of Morse homology with DG coefficients is developed featuring continuation maps invariance functoriality and duality Beyond applications to topology this is intended to serve as a blueprint for analogous constructions in Floer theory The new material and methods presented in the text will be of interest to a broad range of researchers in topology and symplectic topology At the same time the authors are particularly careful to give gentle introductions to the main topics and have structured the text so that it can be easily read at various degrees of detail As such the book should already be accessible and of interest to graduate students with a general interest in algebra and topology
