Clive Ellory, 2013-04-17 The red cell has been a focus for scientific and medical investigation since the earliest times A higher erythrocyte sedimentation rate was associated with diseases usually pyrexias before the thermometer was invented Furthermore ever since the early observers Swammerdam and Leeuwenhoek saw discrete corpuscles in samples of blood using the first microscopes there has been a significant scientific interest in the structure and function of red blood cells The later discovery that red cells were not spherical but biconcave discs introduced a scientific puzzle which is still not completely resolved today and identified the need for a detailed knowledge of the plasma membrane composition and structure and its interaction with the cytoskeleton Important concepts like the lipid bilayer together with its more recent refinement as asymmetric in phospholipid composition led to the identification of translocases involved in actively maintaining its composition Understanding the mechanics of red cell deformation as these biconcave discs traverse capillaries was advanced by the pioneering work of Rand and Burton in the

Sixties and progressed by Evans Skalak and others Based on the bilayer couple hypothesis the shape changes that are possible for a human red cell from echinocyte to stomatocyte were described by Sheetz and Singer in the Seventies in terms of alterations in the individual halves of the bilayer Certain clinical conditions are associated with obvious changes in red cell morphology Practical Management of Haemoglobinopathies Iheanyi Okpala,2008-04-15 Presents a comprehensive picture of care including diagnostic therapeutic and psychosocial aspects The contributors cover basic science and epidemiological aspects of the public health challenge but maintain a focus on the day to day issues encountered in dealing with affected people Containing clear practical advice this text is an essential practical resource to bridge the gap between expensive reference texts and smaller manuals Practical Management of Haemoglobinopathies is an ideal for Trainees and residents in haematology Hematologists in practice Healthcare professionals treating those with sickle cell disease and thalassaemia Why Buy This Book Deals with practical problems encountered in the comprehensive care of affected individuals Each chapter written by an expert in the field Comprehensive coverage of basic science laboratory diagnosis psychosocial support and community care **The American Psychiatric Association Publishing Textbook of Psychosomatic Medicine and Consultation-Liaison Psychiatry, Third Edition** James L.
