*Dysfluencies* Chris Eagle, 2013-11-07 *Dysfluencies* is the first comprehensive study of how speech disorders are portrayed in modern literature Tracing the roots of this interaction between literary practice and speech pathology back to the rise of aphasiology in the 1860s *Dysfluencies* examines portrayals of disordered speech by writers like Zola Proust Joyce Melville and Mishima as well as contemporary writers like Philip Roth Gail Jones and Jonathan Lethem *Dysfluencies* thus speaks directly to the growing interest at present both in popular culture and the Humanities regarding the status of the Self in relation to speech pathology The need for this type of study is clear considering the number of prominent writers whose works foreground disorders of speech Melville Zola Kesey Mishima Roth et al Moreover thinkers like Freud Bergson and Jakobson were similarly concerned with the implications of language breakdown This volume shows this concern began with the rise of neurology and aphasiology which challenged spiritual conceptions of language and replaced them with a view of language as a material process rooted in the brain *Dysfluencies* traces the history of this interaction between literary practice and speech pathology arguing that works of literature have responded differently to the issue of language breakdown as the dominant views on the issue have shifted from neurological circa 1860s to 1920s to psychological circa 1920s to 1980s and back to neurological during the so called decade of the Brain the 1990s

**The Logic of Affect** Paul Redding, 2019-04-15 Most attempts to trace the roots of current scientific approaches to the mind have ignored the contributions of post Kantian German idealism Paul Redding here shows the relevance of this philosophical tradition to an understanding of the mind and its embodiment as well as the relation of feeling to cognition Redding observes how Fichte Schelling and Hegel struggled with the problem of reconciling Kant's normative approach to experience and thought with the naturalistic stance of the emerging medical sciences A century later William James Freud and Jung also addressed the interconnection of thought and feeling reaching views similar to those of the post Kantian idealists In particular Redding argues the idealists conceived of a logic of affect that reemerged in Freud's concept of the primary process and in modern evolutionary ideas of subcortical processing This innovative book demonstrates how new insights can be brought to the study of mentality and consciousness by considering previously overlooked interpretations Redding shows that these early theorists of the unconscious can bring scholars to a better appreciation not only of classical

thinkers like James and Freud but also of contemporary debates about the mind and emotions      Handbook of Cognitive Neuropsychology Brenda Rapp, 2015-12-22 This volume reviews the full range of cognitive domains that have benefited from the study of deficits Chapters covered include language memory object recognition action attention consciousness and temporal cognition      *From Axons to Identity: Neurological Explorations of the Nature of the Self (Norton Series on Interpersonal Neurobiology)* Todd E. Chung, C. Papanicolaou, 2016-05-13 First Published in 1987 This book explores the implications of Henri Bergson's philosophy for contemporary science discussing the misinformed view that Bergsonism stands for a romantic revival of anti scientific vitalism notwithstanding Likewise this study draws value in that Bergson's philosophy appears to offer guidelines as to how to restore paradigmatic cohesiveness between modern physics and the life sciences The authors argue that Bergson's ideas stand a better chance of being appreciated and their heuristic value

harnessed today because the infra structure alluded to before is now in place      Localization and Its Discontents Katja Guenther, 2015-12-08 Psychoanalysis and neurological medicine have promoted contrasting and seemingly irreconcilable notions of the modern self Since Freud psychoanalysts have relied on the spoken word in a therapeutic practice that has revolutionized our understanding of the mind Neurologists and neurosurgeons meanwhile have used material apparatus the scalpel the electrode to probe the workings of the nervous system and in so doing have radically reshaped our understanding of the brain Both operate in vastly different institutional and cultural contexts Given these differences it is remarkable that both fields found resources for their development in the same tradition of late nineteenth century German medicine neuropsychiatry In Localization and Its Discontents Katja Guenther investigates the significance of this common history drawing on extensive archival research in seven countries institutional analysis and close examination of the practical conditions of scientific and clinical work Her remarkable accomplishment not only reframes the history of psychoanalysis and the neuro disciplines but also offers us new ways of thinking about their future
