Neonatal Heart Disease Robert M. Freedom, Leland N. Benson, Jeffrey F. Smallhorn, 2012-12-06 As pediatric cardiology becomes more and more neonatal cardiology and even fetal cardiology Neonatal Heart Disease by Robert M Freedom MD Leland N Benson MD and Jeffrey F Smallhorn MB is extraordinarily timely Neonatal Heart Disease consists of 50 chapters by 25 distinguished contributors and is a worthy successor to The Neonate With Congenital Heart Disease by Richard D Rowe MD and his colleagues 1968 and 1981 The first edition of this book in 1968 established Richard D Rowe MD as the father of neonatal cardiology As most pediatric cardiologists now know Dick Rowe died on January 18 1988 after a brief illness It will therefore come as no surprise that the present volume is dedicated to this great and gentle man Nor will it come as a surprise that I have been asked to devote this Foreword to Richard D Rowe MD pioneering neonatal cardiologist and incomparable personal friend What can one say about Dick Rowe Well there are at least two very different tales There is Dick Rowe the public man the factual account of Dick Rowe's achievements as a physician educator and research man the Dick Rowe that virtually everyone knows And then there is Dick Rowe the private man the extraordinary human being who only his personal friends were privileged to know I shall try to tell something of both stories First the public man the factual account is really quite amazing *Fetal and Neonatal Cardiology* Walker A. The Developing Heart: A 'History' of Pediatric Cardiology Catherine A. Neill,E.P. Clark,2013-04-18 Pediatric cardiology is celebrating in the 1990s the 50th anniversary of the beginnings of the age of therapy This informal history describes how the

discipline grew from the era of pathologic anatomy to the dawn of therapy the beginnings of closed heart surgery between 1939 and 1945 That dawn ushered in a remarkable half century of change and growth leading from clinicophysiology correlations through the start of open heart surgery in the 1950s The text celebrates some of the achievements of this vivid and heroic age and describes how in the mid 1970s new surgical and medical approaches including prostaglandins and Doppler echocardiography led to successful cardiac treatment in infancy the infant era Interventional cardiology and the study of childhood arrhythmias began Now in the 1990s a new era emphasising molecular biology and cardiac development is growing from the tools and concepts of the past The four eras have focused on pathologic anatomy clinicophysiology correlations and surgery heart problems in infancy and now the developing heart In each era there have been advances in the four domains of pediatric cardiology the heart before birth the normal heart heart disease and defects and preventive cardiology Growth in knowledge has been both episodic and dramatic yet not a picture of unalloyed achievement The later chapters discuss some of the problems beginning to be recognised in the new and current developmental era The pioneers of pediatric cardiology both men and women are more than eponyms for each used in new and original ways the tools and concepts available in their era The interaction of tools and concepts is a theme in this book Just as the tool of the stethoscope was vital in delineating the clinical profile of ventricular septal defect and patent ductus the fluoroscope played a role in developing the concept of the Blalock Taussig shunt Pioneers also include patients and their families and the book includes some discussion of what little is known of childhood and of the child with heart disease in the four different eras This is a brief overview of the growth of knowledge of children's hearts from before William Harvey until our own time and includes references to histories of cardiac surgery and to collections of classic cardiac papers By its emphasis on the child as the central historic figure and on the interaction of tools and concepts in the growth of knowledge the text provides a celebratory approach to the 50th anniversary of modern pediatric cardiology

Pediatric Cardiology

Eugenie F. Doyle, Mary A. Engle, Welton M. Gersony, William J. Rashkind, Norman S. Talner, 2013-06-29 At a significant point in the life of an individual or an organization it is normal that one reminisces and savors the qualities of the past In doing so one may learn of facts and factors that explain the present and even project into the future So it is with the Second World Congress of Pediatric Cardiology We can at this time avail ourselves of a panoramic view not only of the present but also an exposure of the past and a glimpse of what lies ahead When Dr Jane Somerville and Professor Fergus Macartney proposed

developing a World Congress of Pediatric Cardiology the factors of vision and imagination were driving forces These with the aid both of hard work and dedication to purpose led to the being of the First Congress The major success of that meeting was not without premonitory concerns as to the width of multinational acceptance of a concept that Pediatric Cardiology had come of age and a firm foundation for academic interchange existed The Congress showed that much had been learned and that there were many eager to share of accumulated knowledge and reflections of skills with the very many hundreds who came to the First Congress The responses to the First Congress were so enthusiastic that the idea of having a continuum of World Congresses of Pediatric Cardiology was widely accepted I do not know that the subject was even debated after the First Congress went into session
