

JURASSIC PARK RAPTOR VS REAL RAPTORS

(based on the current scientific understanding)

CLEVER GIRL?

The movie portrays raptors as ultra intelligent killing machines.

Although intelligence in dinosaurs and raptors is often underappreciated, there is no evidence for *Deinonychus* and its possessing it to such high levels.

SIZE

In the movie raptors are tall enough to stare down Ned in the eye.

Deinonychus would have stood as tall as a short child and *Velociraptor* were a half size from height.

Since Jurassic Park was released, raptors of a similar size to the ones in it, the *Mutaborator* and *Archibator* have been described.

NAMING

The Jurassic Park raptors were based on the North American *Deinonychus*.

In the movie they are called *Velociraptors*, partly because of naming issues at the time, but mostly because it just sounds cooler.

HANDS

Movie raptors have downward facing hands.

The actual dinosaurs were not able to rotate their hands that way. Their hands faced each other in a "clapping" position.

FEET

The raptors in Jurassic Park walk on big padded feet.

Deinonychus and its relatives had more slender, bird-like feet.

FEATHERS

The movie features large white winged monsters. *Velociraptor*, *Deinonychus* and its were covered in feathers from head to tail.

TAILS

The movie raptors have deadly tails which they wriggle around. The real animals used their tails as a stiff counterbalance, holding it straight with vertical feathers.

Bird, Daniel E. Varland, Juan Jose Negro, 1996-02-08 This book is a collection of papers highlighting ways in which Raptors have successfully adapted to man made landscapes and structures The coverage of Raptors in Human Landscapes is broad ranging from the impact of human activity on country wide scales to the particular conditions associated with urban cultivated and industrial landscapes as well as to the various schemes specifically directed towards the provision of artificial nest sites and platforms The cases described hail from a wide geographic range including North and South America Europe Africa and elsewhere and from a broad spectrum of species groups such as the falcons accipiters eagles kites and many others This is a book of immense value not only to ornithologists and conservation biologists but also to engineers and managers involved in all kinds of building and environmental work in cities power and water works agriculture and forestry Serves as a good introduction to all aspects of the subject Focuses on successful adaptations of Raptors to environmental change *Migrating Raptors of the World* Keith L. Conservation Using Umbrella Species Futoshi Nakamura,2018-02-23 This book focuses on Blakiston's fish owl and the red crowned crane as umbrella species Healthy river riparian and wetland ecosystems are necessary to maintain the populations of the two species Both species have been revered by people since ancient times but both are currently listed as endangered because of their small population sizes The population decline of the two species can be mainly attributed to the degradation of the natural riparian and wetland habitats which is associated with land use development The populations of the two species are now recovering in Japan due to recent conservation and reproduction efforts but the genetic diversity of the two species are still low due to previous bottleneck effects To develop conservation and dispersal plans to establish the species over the East Asian mainland and on the island of Hokkaido basic information such as their regional distribution genetic diversity food availability reproductive traits and nesting breeding rearing and commuting habitat is essential The intensive collaborative studies conducted in Japan and Russia has clarified the status quo and the ecology of the two species This is the first book that comprehensively compiles the above information for the mainland and island populations In addition it verifies their suitability as umbrella species of an ecosystem and the possibility of their future population expansion taking into account changes in land use in Hokkaido which is about to experience a dramatic decline in human population As such the book provides valuable information for students who wish to learn about these beautiful symbolic creatures for NGOs engaged in conservation activities and for managers who are involved in creating conservation plans and implementing restoration projects **Wedge-tailed Eagle** Penny Olsen,2005 Overview of Australia's largest true eagle and one of the country's few large predators and scavengers covers distribution habitat hunting reproduction and chick development

Raptors Keith L. Bildstein,2017-05-02 Raptors are formally classified into five families and include birds such as eagles ospreys kites true hawks buzzards harriers vultures and falcons that are familiar and recognized by many observers These

diurnal birds of prey are found on every continent except Antarctica and can thrive in seemingly inhospitable spots such as deserts and the tundra. They have powerful talons and hooked beaks for cutting and tearing meat and keen binocular vision to aid in their hunting prowess. Because of their large size, distinctive feeding habits and long distance flight patterns, raptors intrigue humans and have been the subject of much general interest as well as extensive scientific research. Keith L. Bildstein has watched and studied raptors on five continents and is well prepared to explain their critical importance not only as ecological entities but also as inspirational tokens across natural and human dominated landscapes. His book offers a comprehensive and accessible account of raptors including their evolutionary history, their relationships to other groups of birds, their sensory abilities, their general natural history, their breeding ecology and feeding behavior and threats to their survival in a human dominated world. Biologically sound but readable, *Raptors* is a nontechnical overview of this captivating group. It will allow naturalists, birders, hawk watchers, science educators, schoolchildren and the general public along with new students in the field of raptor biology to understand and appreciate these birds and in so doing better protect them.
