*Climate Change and Water Resources Planning Criteria* Kenneth D. Frederick, D.C. Major, Eugene Z. Stakhiv, 2013-04-17 Global climate change is expected to have major impacts on water resources and aquatic ecosystems This prospect presents planners who are already struggling to meet the demands of growing populations and economies with new challenges This volume examines these challenges and the resulting conceptual issues for water

planning and project evaluation practices The book is the first attempt to consider whether and how water resources planning principles and evaluation criteria should be altered in view of the potential impacts of anthropogenically induced climate change The principles and procedures that are in use today along with new approaches to nonstructural flood plain management watershed management water markets and wetland banking will serve as the basis for the policies and strategies that deal with climate variability and anticipated change This collection of papers reviews what water management ideas work which ones need to be changed and how planners and managers should begin incorporating aspects of risk and uncertainty into management decisions to deal expertly with climate change     *Economic Impacts of Intelligent Transportation Systems* E Bekiaris,Y J Nakanishi,2004-07-24 There are unique complexities associated with the economic valuation of Intelligent Transportation Systems ITS and telematics Traditional methods of quantitative analysis may not be appropriate in accurately and reliably assessing the economic impacts of these technologies Although advanced transportation and related technologies are being planned and deployed at an increasingly rapid pace many of the technologies are still relatively new and their use may not be widespread Much of the initial information and statistics gathered have been anecdotal and have focused more on benefits rather than costs Therefore difficulties arise due to the lack of historical data and lessons learned from which to draw upon In addition compared with traditional transportation infrastructure ITS technologies have different life cycles cost structures and a number of interrelated elements This book addresses these concerns and proposes new economic assessment techniques as well as modifications to existing ones Included are case studies from a multitude of North American European and Asian nations and major metropolitan areas covering a wide range of ITS technologies including freeway management electronic toll collection advanced driver assistance systems and traveller information systems     Engineering Economics Analysis for Evaluation of Alternatives Ira H. Kleinfeld,1993-01-12 The engineer s guide to economical decision making Engineering economics is an important subject for both aspiring and practicing engineers As global competition increases engineers are increasingly asked to analyze and monitor their processes and products not only to ascertain their level of quality but their cost effectiveness as well It is imperative to know the scientific and engineering principles of design work and decision making in a world where technology is constantly evolving Kleinfeld s *Engineering Economics Analysis for Evaluation of Alternatives* offers students professors and professionals guidance for making smart economical decisions when it comes to design and manufacturing     **Program Planning and Evaluation for the Public Manager** Ronald D. Sylvia,Kathleen M. Sylvia,2012-03-21 In an era of rapidly shrinking resources efficient utilization of public resources is of paramount importance Health care social services education law enforcement and other fields have established their own standards against which program operations are assessed National accrediting bodies have implemented systems of rigorous peer review to ensure the quality of program processes and outcomes Nongovernmental organizations must demonstrate success in achieving their stated goals in order to sustain

or expand program funding In the 21st century process how programs are organized and how work is conducted has become as important as outcomes in determining program effectiveness Responding to these dynamic challenges the authors utilize concrete case studies to immerse students in the techniques of program evaluation They effectively examine systems theory project planning queuing theory cost benefit analysis and organization processes including standards based program accreditation providing practical examples in an easy to comprehend style In addition comprehensive discussions explain how process intervention is utilized to achieve program adaptations and strategic change Like its highly regarded predecessors the latest edition features evaluation exercises designed to facilitate student development of indicators and measures when dealing with real world programs An Instructors Manual provides solutions to the case studies in the appendix of the text further clarifying the program planning and evaluation process
