The Impact of Climatic Variations on Agriculture M.L. Parry,T.R. Carter,N.T. Konijn,2012-12-06 Three important studies were initiated in the 1970s to investigate the relationship between climatic variations and agriculture by the National Defense University 1980 on Crop Yields and Climate Change to the Year 2000 by the U.S. Department of Transportation 1975 on Impacts of Climatic Change on the Biosphere and by the U.S. Department of Energy 1980 on Environmental and Societal Consequences of a Possible CO₂ Induced Climatic Change the CLAP 2 study These were pioneering projects in a young field Their emphasis was on measuring likely impacts of climatic variations rather than on evaluating possible responses and they focused on first order impacts e.g. on crop yields rather than on higher order effects on society A logical next step was to look at higher order effects and potential responses as part of a more integrated approach to impact assessment This was undertaken by the World Climate Impact Program WCIP which is directed by the United Nations Environment Program UNEP The WCIP is one of four aspects of the World Climate Program which was initiated in 1979

Climatic Variations and Forcing Mechanisms of the Last 2000 Years

Philip Douglas Jones,Raymond Stephen Bradley,Jean Jouzel,2013-06-29 A profound knowledge of the past climate is vital for our understanding of global warming The past 2000 years are both the period which is of most relevance to the next century and that for which there is the most evidence High resolution proxy records for this period are available from a variety of sources Five sections consider dendroclimatology ice cores corals historical records lake varves and other indicators The final two sections cover the histories of various forcing factors and attempt to bring together records from a variety of sources and provide explanations
