Shrub Steppe Balance And Change In A Semi Arid Terrestrial Ecosystem:

Shrub-Steppe Alec Rickard, L.E. Rogers, B.E. Vaughan, S.F. Liebetrau, 2012-12-02 Owing to man made intervention the shrub steppe now represents a rapidly disappearing landscape in the arid regions of North America This book represents a systems level study of ecological variables affecting water balance and responses to perturbation The study focused on a very large protected landscape unit comprising a natural watershed area located in the semi arid western United States Long term and concurrent data sets were established with a view towards establishing system level responses to manipulative interventions and natural perturbations like wildfire These data sets were established for micrometeorology climatology mineral cycling in soils nutrient and mineral pathways in springs and streams vegetational dynamics and population changes on the site In synthesizing nearly twenty years of data the more interesting ecosystem level responses concerned vegetational recovery and water balance For instance the synthesis uniquely demonstrates the interaction of biotic and non biotic factors and their integrated effect on regional water balance However special attention was also paid to species diversity and the genetic resource pool represented at this site This book will be of primary interest as a reference resource to land managers and wildlife specialists and as a research study for scientists interested in systems level ecology Conservation minded citizens who take more than a cursory interest in ecology will also find it interesting Shrub-steppe Balance and Change in a Semi-arid Terrestrial Ecosystem William Howard Rickard, 1988 **Proceedings, Wildland Shrub and Arid Land Restoration Symposium**, 1995 **Wild Land Shrub and Arid Land Restoration Symposium** Bruce A. Roundy, E. Durant McArthur, Jennifer S. Hayley, David K. Mann, 1996-06 An authoritative investigation of the biology and management of wildland shrubs Focuses on the development of the science of restoration ecology An in depth look at the restoration and revegetation of even the most rare shrubs Divided into six sections overview restoration and revegetation ecology genetic integrity and management options Dozens of charts graphs and photos **Proceedings, Shrubland Ecosystem Dynamics in a Changing Environment** Jerry R. Barrow, 1996 This proceedings contains 50 papers including an overview of shrubland ecosystem dynamics in a changing environment and several papers each on vegetation dynamics management concerns and options and plant ecophysiology as well as an account of a Jornada Basin field trip Contributions emphasize the impact of changing environmental conditions on vegetative composition especially in the Jornada Basin and Chihuahuan Desert but also in other parts of western North America and the world **Major Douglas-fir Habitat Types of Central Idaho** Robert Wilbur Steele, Kathleen Geier-Hayes, 1995 General Technical Report RMRS, 1998 **Advances in Ecological Research**, 1990-10-23 Volume 20 of this series deals with a variety of plant and animal ecology topics Despite much recent work on herbivory little attention has been given to insect herbivores active below ground Brown and Gange describe the ecological adaptations of insects to this abundant but poor quality food resource and the responses of plants to this potentially very damaging grazing pressure Plants living at high altitude must be able to cope with extreme climatic

conditions low carbon dioxide levels and high radiation doses Friend and Woodward describe these adaptations and discuss the degree to which they are genetically determined or merely the product of physiological plasticity Thomas presents a modular concept of ecology in which modules contain a resource and its associated consumers and goes on to examine the general principles which may reflect the various mutualisms between organisms in some example fresh water modular systems Finally West examines the microphytic soil crusts of arid and semi arid soils Although information on them is currently limited they are likely to be important in some ecosystems

Evaluating Evapotranspiration for Grasslands on the Arid Lands Ecology Reserve, Benton County, and Turnbull National Wildlife Refuge, Spokane, County, Washington, May 1990 to September 1991

Stewart A. Tomlinson, 1995 Ground Freezing Effects on Soil Erosion of Army Training Lands, 1998 Two areas were monitored at the Yakima Training Center YTC in central Washington to measure changes in M1A2 Abrams M1 tank rut surface geometry and in and out of rut saturated hydraulic conductivity Ksubfs soil penetration resistance SPR and bulk density over the 1995 1996 winter Profile meter data show that rut cross sectional profiles smoothed significantly and that turning ruts did so more than straight ruts Rut edges were zones of erosion and sidewall bases were zones of deposition Ksubfs values were similar in and out of ruts formed on soil with 0 5 percent water by volume but were lower in ruts formed on soil with about 15 percent water Mean SPR was similar in and out of ruts from 0 to 5 cm depth increased to 2 MPa outside ruts and 4 MPa inside ruts at 10 to 15 cm depth and decreased by 10 38 percent outside ruts and by 39 48% inside ruts at the 30 cm depth Soil bulk density was similar in and out of ruts from 0 to 2 5 cm depth and below 2 5 cm it was generally higher in ruts formed on moist soil with highest values between 10 and 20 cm depth Conversely density in ruts formed on dry soil was similar to out of rut density at all depths This information is important for determining impacts of tank ruts on water infiltration and soil erosion and for modifying the Revised Universal Soil Loss Equation RUSLE and the Water Erosion Prediction Project WEPP models to more accurately predict soil losses on Army training lands **General Technical Report INT.**, 1996

Biological Soil Crusts: Structure, Function, and Management

Jayne Belnap, Otto L. Lange, 2013-12-01 In arid lands where vegetation is sparse or absent the open ground is not bare but generally covered by a community of small highly specialized organisms Cyanobacteria algae microfungi lichens and bryophytes aggregate soil particles to form a coherent skin the biological soil crust It stabilizes and protects the soil surface from erosion by wind and water influences water runoff and infiltration and contributes nitrogen and carbon to desert soils Soil surface disturbance such as heavy livestock grazing human trampling or off road vehicles breaks up the fragile soil crust thus compromising its stability structure and productivity This book is the first synthesis of the biology of soil crusts and their importance as an ecosystem component Composition and functioning of different soil crust types are discussed and case studies are used to show the impact of crusts on landscape hydrology soil stability nutrient cycles and land management

Structure and Functioning of Seminatural Meadows M. Rychnovská, 2012-12-02 Twelve years analysis of natural

grassland and experimentally managed meadows have produced this unique set of data on the structures and physiological functions of primary producers consumers and decomposers Obtained during the 1973 1985 Ecosystem Study on Highland Meadows in Czechoslovakia such original information is rare in scientific literature The aim of the study was to define the functioning of these grasslands and their changes under different impact of man and to examine the ecological function of those ecosystems in the intensively managed catchment area Hence this book contains deep analyses of soil microorganisms their functions in decomposition and soil forming processes leading to the evaluation of the whole carbon cycle as well as dealing with nitrogen pathways in the experimental plots resulting in precise determination of the full nitrogen cycle Procedures used in practical agriculture such as cutting fertilization and renovation have also been applied producing evaluations from both ecological and economical view points The book s integrated ecosystem approach to grasslands its deep professional analyses in each section along with the synthesis on each particular level and across all levels renders it an invaluable informative text comprising extensive figures and tables and a substantial bibliography of world wide sources
