**Nonsteroidal Anti-inflammatory Drugs** Alan Lewis, Daniel E. Furst, 1987

**New Developments in Antirheumatic Therapy** K. D. Rainsford, G.P. Velo, 2012-12-06 At present we may be at the cross roads in the therapeutic approaches we have for the treatment of the 100 or more rheumatic conditions This is because we now recognise that although some advances have been made with the development of a large range of non steroidal and steroidal drugs during the past two decades or so we now recognise that many if not all of these have rather limited effects on many of the disease processes which underlie the manifestations of the various rheumatic states Advances in molecular biology in the past 5 10 years have enabled these tools to be applied extensively for developing further our understanding of the rheumatic disease processes In some cases these molecular tools e.g. interferon interleukin 2 T cell antibodies have been directly employed as therapies themselves While the outcome from trials with such agents in rheumatoid arthritis in particular has not been as would have been hoped these results as with cyclosporin A and low dose methotrexate in the therapy of rheumatoid arthritis have given us important indications for the approach employing what are generally described as immunomodulators to control this disease But this may not be the same type of approach which is desirable for all types of rheumatic conditions Indeed even the way which the present range of drugs and other therapies are applied may not be the most effective and safe means of treating different types of arthritic conditions
