Long Wave Rhythms In Economic Development And Political Behavior:

Long-Wave Rhythms in Economic Development and Political Behavior Brian J. L. Berry, 1991 Is economic development a random walk or do underlying rhythms and cycles make it possible to anticipate long term trends Many social scientists have rejected the notion of long term periodicity in economic trends Now after extensive analysis of economic data distinguished scholar Brian J L Berry has found new evidence for the reliability and the value of long wave theory In *Long Wave Rhythms in Economic Development and Political Behavior* Berry argues that the synchronization of long waves and growth cycles is more than a figment of some overactive imagination Presenting his findings graphically he argues that there is persuasive evidence of the existence of deterministic chaos Applying his analysis of rates of change to the economic phenomena of prices Kondratiev cycles and growth Kuznets cycles he discovers that pairs of 25 year growth cycles are embedded within 55 year long waves As a result Berry concludes two different kinds of growth cycles one inflationary and the other deflationary form a complementary pattern of alternating crises with stagflation and depression Berry also explores the shifting sand of cyclical phenomena in the stock market voting behavior the incidence of wars the rise and fall of great powers and mass psychologies While avoiding dogmatic conclusions he offers a provocative discussion of the long wave context of social phenomena As he examines the American economy in long wave context Berry optimistically asserts that the bust is not inevitable Technological advances in information transfer enable leaders and organizations to anticipate and alleviate the adverse effects of economic cycles Like it or not he writes our lives appear to be embedded in a higher order of complexity collectively we are a societal organism that displays self regulating fluctuations around a path of growth

Innovative Behaviour in Space and Time Cristoforo S. Bertuglia, Silvana Lombardo, Peter Nijkamp, 2012-12-06 In the past decade there has been growing recognition that economic development is not mainly exogenously determined but to a large extent is a transformation process induced and governed by economic actors who respond to competitive institutional and political challenge This challenge and response model is increasingly accepted as a valid analytical framework in modern growth theory and also explains the popularity of endogenous growth approaches to technological innovation issues However a major and as yet largely under researched topic is the question of the diffusion and adoption of new technological changes in the context of space time dynamics This diffusion and adoption pattern has obviously clear spatial and temporal variations connected with behavioural responses which may vary over time and different locations This means that a closer analysis of spatio temporal opportunities and impediments is necessary in order to fully map the complex interactions of technology and economy in space and time This volume sets out to bring together a collection of original contributions commissioned by the editors to highlight the spatio temporal patterns and backgrounds of the diffusion and adoption of new technologies Some are in the nature of a survey others have a modelling background and again others are case studies The contributions originate from different countries and different disciplines This book is complementary to a previously published volume on technological innovation Technological Change Economic Development and Space edited by C S Bertuglia M M Fischer and G Preto and also published by Springer Verlag 1995 **Selling Your Business** Louis P. The Dynamics of New Firm Formation Vinod Sutaria,2017-11-22 This title was first published in 2001 The dynamics of New Firm Formation NFF are central to the phenomenon of economic growth and development While the economic importance of NFF has been recognized the mechanisms that drive NFF are not well documented or understood Illustrated by an in depth case study from Texas this volume analyzes the relationships between NFF and its localized context Using specially formulated fixed effects regression models the study brings about controversial new findings These provide a counterpoint to the neoclassical theory that there is an adversarial relationship between small and large firms by instead suggesting that the relationship is more of a symbiotic one Furthermore it suggests that deep churning the turnover and replacement in a business base is a key factor in understanding the forces shaping regional economies Limits to

Globalization Eric Sheppard,2016-06-24 This book summarizes how globalizing capitalism the economic system now presumed to dominate the global economy can be understood from a geographical perspective This is in contrast to mainstream economic analysis which theorizes globalizing capitalism as a system that is capable of enabling everyone to prosper and every place to achieve economic development From this perspective the globalizing capitalism perspective has the capacity to reduce poverty Poverty s persistence is explained in terms of the dysfunctional attributes of poor people and places A geographical perspective has two principal aspects Taking seriously how the spatial organization of capitalism is altered by economic processes and the reciprocal effects of that spatial arrangement on economic development and examining how economic processes co evolve with cultural political and biophysical processes From this globalizing capitalism tends to reproduce social and spatial inequality poverty s persistence is due to the ways in which wealth creation in some places results in impoverishment elsewhere **The Great Powers and Global Struggle, 1490-1990** Karen A.

Rasler,William R. Thompson,2021-10-21 In *The Great Powers and Global Struggle* Karen A Rasler and William R Thompson focus on two themes the rise and fall as well as the relative decline of major world powers over the past five hundred years and the way in which these processes have set the stage for the outbreak of global war Their interdisciplinary approach encompasses political science economics sociology geography and history The most significant wars occur when regional leaders historically in Western Europe challenge global leaders By studying the wars of Napoleon Louis XIV Phillip II and the Italian Indian Ocean wars of the sixteenth century through World Wars I and II to the present the authors challenge the long held idea that prosperity leads to over consumption and underinvestment and thus decline a theory traceable to ancient times that remains the principal explanation for global decline today Arguments about global structural change and its

implications abound but rarely is the abstract translated into concrete historical terms with emphases on specific actors and empirical documentation Rasler and Thompson reinterpret the past five hundred years of major power warfare and provide extensive tests of the eighteen generalizations critical to their argument They conclude that those who argue that global war and repositioning are no longer a concern among the major powers lack critical understanding of the behavior that contributes to such conflict

Globalization as Evolutionary Process George Modelski, Tessaleno Devezas, William R. Thompson, 2007-12-20 The term globalization has gained widespread popularity yet most treatments are either descriptive and or focused on changes in economic interconnectivity In this volume the concept is seen in broader terms as leading international experts from a range of disciplines develop a long term analysis to address the problems of globalization The editors and contributors develop a framework for understanding the origins and trajectory of contemporary world trends constructing testable and verifiable models of globalization They demonstrate how the evolutionary approach allows us to view globalization as an enterprise of the human species as a whole focusing on the analytical problem of global change and the rules governing those changes The emphasis is not on broad based accounts of the course of world affairs but selectively on processes that reshape the social of the human species the making of world opinion and the innovations that animate these developments Chapters are clustered into four foci One emphasizes the interpretation of globalization as an explicitly evolutionary process A second looks at historical sequences of such phenomena as population growth or imperial rise and decline as processes that can be modeled and not purely described The third cluster examines ongoing changes in economic processes especially information technology A final cluster takes on some of the challenges associated with forecasting and simulating the complexities of globalization processes This innovative and important volume will be of interest to students and scholars across the social sciences concerned with the phenomenon of globalization

A Systems-Based Approach to Policymaking Kenyon B. de Greene, 2012-12-06 This book is based on a number of systems concepts of which the following are emphasized here

- oThe interacting systems of society and the environment are dynamic and evolutionary
- oEvolution of these systems carries them through stages of differential stability and instability continuity and discontinuity
- oAssociated with evolution and instability is structural change that is essentially irreversible
- oThe present is a stage of world transformation that may not have been equaled for decades or even centuries
- oPolicies and decisions must match the times in the present case the stage of world transformation

The time 11 59 59 PM approximately on December 31 2000 has an important symbolic meaning It marks the end of a minute the end of an hour the

end of a day the end of a year the end of a decade the end of a century and the end of a millennium The time and date provide a convenient yardstick against which we can evaluate the evolution of our thinking and the adequacy of our assumptions mental models paradigms and policies Will the beginning turn out to be appropriately different from the end We hope that this book is helpful in such evaluation This is a new paradigm book which both presents and advances the new way of thinking about the systems of science technology society economics politics and the environment and actively calls for the replacement of the worn out cognitive sociotechnical paradigm Great Divergence and Great Convergence Leonid Grinin, Andrey Korotayev, 2015-05-09 This new monograph provides a stimulating new take on hotly contested topics in world modernization and the globalizing economy It begins by situating what is called the Great Divergence the social technological revolution that led European nations to outpace the early dominance of Asia in historical context over centuries This is contrasted with an equally powerful Great Convergence the recent economic and technological expansion taking place in Third World nations and characterized by narrowing inequity among nations They are seen here as two phases of an inevitable global process centuries in the making with the potential for both positive and negative results This sophisticated presentation examines Why the developing world is growing more rapidly than the developed world How this development began occurring under the Western world's radar How former colonies of major powers grew to drive the world's economy Why so many Western economists have been slow to recognize the Great Convergence The increasing risk of geopolitical instability Why the world is likely to find itself without an absolute leader after the end of the American hegemony A work of rare scope Great Divergence and Great Convergence gives sociologists global economists demographers and global historians a deeper understanding of the broader movement of social and economic history combined with a long view of history as it is currently being made it also offers some thrilling forecasts for global development in the forthcoming decades

R. Dark, 2016-10-06 Since the end of the Cold War analysts of international politics have given much greater attention to issues of change It has become increasingly clear to specialists from many fields that any understanding of large scale political change must encompass far

longer timescales than has been usual in the study of world politics and must incorporate multi disciplinary perspectives This book evaluates and draws on relevant theoretical approaches from other disciplines such as sociology economics geography history anthropology and archaeology as well as evolutionary theory and the mathematical study of complexity Using an epistemological framework Dark sets out a theory of long term world political change the theory of Macrodynamics This is then applied to historical anthropological and archaeological data to explain the changing forms of political organization from the earliest human societies to the late twentieth century The resulting analysis is a reinterpretation of the processes of global political change in the past and present This in turn opens new areas of enquiry in the study of international relations and has profound implications for how we understand the changing world of today
