Dream Planet: Star Maze Book 1 , Genre Space opera Comparison Veronica Roth s Carve the Mark meets Interstellar For over 22 years now since my earliest memories I close my eyes and see the same dream over and over again In front of me there is a world with an endless dome sky sprinkled with stars gigantic green plants and a multicolour buffet of herbs and fruit It s a world that s warmed with the light of a golden sun whose rays simply radiate warmth without killing anyone almost as if from a fairytale It s a world filled with crystal like water and uncontaminated oxygen My visions are so bright that they outshine reality itself Every time as I wake up in my capsule it s as if I return to the shadows stepping away from that pure light Going to a space station with the task of catching a dangerous spy I couldn t imagine that this would be the person to reveal the truth and essence of my dreams The pulse which the old man Iza spotted transmits the sights music and even the language of an unexplored yet inhabited planet exactly identical to what I envision I always knew that a long road was waiting for me but what exactly awaits on the other side of this mysterious star maze

Haywood,2016-07-18 This thesis develops new and powerful methods for identifying planetary signals in the presence of noise generated by stellar activity and explores the physical origin of stellar intrinsic variability using unique observations of the Sun seen as a star In particular it establishes that the intrinsic

stellar radial velocity variations mainly arise from suppression of photospheric convection by magnetic fields With the advent of powerful telescopes and instruments we are now on the verge of discovering real Earth twins in orbit around other stars The intrinsic variability of the host stars themselves however currently remains the main obstacle to determining the masses of such small planets The methods developed here combine Gaussian process regression for modeling the correlated signals arising from evolving active regions on a rotating star and Bayesian model selection methods for distinguishing genuine planetary signals from false positives produced by stellar magnetic activity The findings of this thesis represent a significant step towards determining the masses of potentially habitable planets orbiting Sun like stars **Locomotive Engineers**
