Loos Hamra Region:

The Loos-Hamra Region Harry von Eckermann, 1936 *The Geology of the Dalskog Dals-Rostock Region, Dalsland, Sweden* Pierre Heybroek, 1951 **Basement and Basins of Eastern North America** Ben A. Van der Pluijm, Paul A. Catacosinos, 1996-01-01 *Spilites and Spilitic Rocks* G.C. Amstutz, 2012-12-06

The idea for the present Spilite Volume was born during the Spilite Symposium at the XXIIIrd session of the International Geological Congress in Prague 1968. At that time only a restricted number of petrologists working on spilites was present and therefore the group assembled agreed that a Symposium Volume should also include recent papers by many other spilite specialists. At the same time it was agreed that the papers presented at the Symposium should be returned to the authors for changes and additions. This procedure of upgrading and amending the papers has continued until this year 1973 for various technical and editorial reasons. The information presented here is therefore up to date. To those familiar with the spilite problem it is obvious that the time had come for a review of its state. Also the existing literature had become so voluminous that a monographic review was necessary. Following a modern trend the authorship for this review was spread among specialists with variable experience. For readers not necessarily familiar with the spilite problem a brief summary is presented here. A short historical note is followed first by the observations then by the interpretations finally by some of the major features of scientific logic as they pertain to the problem of the primary or secondary origin of some of the rocks termed spilites and keratophyres.

Proceedings of the Estonian Academy of Sciences, Geology, 1992 Geological Evolution of the Earth During the Precambrian L.J. Salop, 2012-12-06

Progress in Precambrian geology has been exceptionally great indeed quite striking for geologists of the older generation only some 30-40 years ago the Precambrian appeared as an uncertain and even mystic prelude to geologic evolution. Even the very name Precambrian means some invisible unit in the early history of the Earth the beginning of which is poorly known. At the same time it was obvious that the Precambrian formations are of extremely varied and complex composition and poor knowledge and lack of reliable methods of division and correlation were to blame for the lack of significant progress in studies of this early evolutionary stage of the planet. Certainly even at the very start of Precambrian studies the results obtained were quite promising lifting as they did the mysterious veil over the regional Precambrian but they presented no general realistic picture of this early stage in the Earth's evolution at that time. Recently this situation has completely changed due to new methods of study of the older formations and due also to the refinement of some well known methods in particular of division dating and correlation of silent metamorphic strata. Application of different isotope methods of dating was most important in providing objective rock age and thereby the age of geologic events recorded in these rocks. Thus it became possible to reconstruct the oldest geologic period of our planet. *Ser. Ba*, 1968
