techniques with new insights into the Dong's cosmology and rituals of everyday life meshed with the architecture and the symbolic meanings. It examines how the buildings and techniques of the Dong are ordered and influenced by the local culture and context. The timber bridges and drum towers are the Dong's most prominent architectural monuments. Usually built elaborately with multiple roofs, these bridges and drum towers were designed and maintained by the local carpenters who also built the village suspended houses in an oral tradition carried down from father to son or to apprentice. They were funded entirely by the local people and the bridges tend to be built in places without great pressure of traffic or another bridge already existing close by. Why does such great expense go into the Dong's buildings with elaboration? How were they built? And what do they mean to their users and builders? This book is an anthropological study on the Dong's architecture and technique and it aims to contribute a discourse on the interdisciplinary research area. It is suitable for graduate and postgraduate readers. Euclid in China Engelfriet, 2021-11-01

As part of the Jesuits programme of introduction to European culture in 1607 the Elements of Euclid 300 BC were translated for the first time into Chinese. The translation of this epoch making ancient Greek textbook on deductive geometry meant a confrontation of contemporary Chinese and European cultures. Part I of Peter Engelfriet's work deals mainly with the European and Chinese backgrounds, part II with linguistic and textual matters. In part III the manner in which learned Chinese tried to integrate this new knowledge into their own Chinese mathematical and cultural traditions comes to the fore. This fascinating work explores in depth and at various levels the circumstances and mechanisms that shaped the transmission of a key work of science from one language and cultural context onto another. Consequently it offers often surprising insights into the ways of intercultural exchange and misunderstandings.

Reconstruction Designs of Lost Ancient Chinese Machinery Hong-Sen Yan, 2007-11-18. South pointing chariots, walking machines and the astronomical mechanical clock are all used as illustrated examples in this fascinating and unique study of lost machinery in ancient China. This is the first book of its kind combining creative mechanism design methodology with mechanical evolution and variation theory to set out how some ancient designs can be recreated. Furthermore, the book reflects on how age-old wisdoms could stimulate stunning new machinery in the future. *Cultures of Knowledge*

, 2011-11-14. Looking at knowledge transmission as a cultural feature, this book isolates and examines the individual factors that affect knowledge in the making and created uniquely Chinese cultures of knowledge. The volume is organized into four sections: Internode, Imperial Court, Agora, and Scholarly Arts. Each has a theoretical introduction followed by two core contributions from experts in Chinese history. The section concludes with a reflection by a historian of Western Technology who scrutinizes each sphere and identifies the points that reflect universal technological experience. The combination of broadly sketched theoretical introductions and detailed core contributions provides an unparalleled insight into pre-modern Chinese history from the Song to early Qing dynasty, revealing Chinese attitudes towards innovation and invention.
