This book embraces some scientific methods, innovations, and advanced technologies which were widely examined on machine buildings and ship repair plants. The main objective of this book is to provide engineers, technical personnel, and managers with some problems which have place in the process of the production of machines and mechanisms and to find the ways of solving them. In basis of this task were put such questions as increasing quality production and decreasing its cost. In this book these topics have been organized into three chapters. CHAPTER I presents the most important problems of any engineering industry: this is the decreasing of waste products such as cast iron, bronze, graphite chip, or dust etc. to the environment and also increasing the reliability of any mechanism and machine for the people in condition of their operation. The author recommends for this goal widely to use the pneumatic transportation and some new innovations. CHAPTER II discovers some advanced technologies in Manufacturing Engineering and shows the effectiveness of some machines and mechanisms. Here also is given big attention to the question of increasing quality production and productivity labor. CHAPTER III relates advantageously to Maritime Engineering and discovery of some progressive methods for the ship repair plants and also for the ships which sail in condition of waves in the tropical seawaters. This book can be used also for the students or other practicing professional in business industry or government. This book includes about 86 illustrations, many innovations, and different advanced technologies. Anatoly I Rozenblat, Member of ASME, SNAME, and SME, Chicago, USA, June 2001. **The Refracted Muse** Enrique García Santo-Tomás, 2017-08-08. Galileo never set foot on the Iberian Peninsula, yet as Enrique García Santo-Tomás unfolds in *The Refracted Muse*, the news of his work with telescopes brought him to surprising prominence, not just among Spaniards working in the developing science of optometry but among creative writers as well. While Spain is often thought to have taken little notice of the Scientific Revolution, García Santo-Tomás tells a different story, one that reveals Golden Age Spanish literature to be in close dialogue with the New Science. Drawing on the work of writers such as Cervantes, Lope de Vega, Calderón de la Barca, and Quevedo, he helps us trace the influence of science and discovery on the rapidly developing and highly playful genre of the novel. Indeed, García Santo-Tomás makes a strong case that the rise of the novel cannot be fully understood without taking into account its relationship to the scientific discoveries of the period. *Rehoboam* Tracey R. Newman, 2019-09-09. In 2016, Dr. Tobias Alger, renowned archaeologist and friend of American archaeologist Nick Piper, is brutally murdered in the jungles of Bolivia, just as he is on the verge of his greatest discovery. At a time when Jerusalem is the center of the world, fierce warrior and sorcerer Prince General Rehoboam is confronted by a destiny he never wanted.
