*Oil and Modern World Dramas* Alireza Fakhrekondeh, 2023-03-31 The first to focus on the representations of oil in dramatic

literature theatre and performance Oil and Modern World Dramas is a pioneering volume in the emerging field of Oil Literatures and Cultures and the more established field of World Literatures Through close analysis Fakhrkonandeh demonstrates how these dramatic works depict oil both in its perceived nature and character as an overdetermined matter sign object a symbol of freedom autonomy speed wealth modernity enlightenment a commodity a social cultural agent a social relation and a hyper object This book is also distinguished by its innovative and critically manifold conceptual framework positing the petro literatures and petro cultures an inextricable part of a global network Oil and Modern World Dramas not only demonstrates how the chosen works of petro drama manifest these concepts in their social political vision aesthetics and historical ontological dynamics but also reveals how they deploy such assemblage based approaches both as a cartographical means and aesthetic method for exposing the systemic Capitalocenic nature of petro capitalist exploitation and as means of proposing ways of resistance and producing alternative modes of subjectivity community relationality and economy

*Exploring Quantum Contextuality with Photons* Zheng-Hao Liu, 2023-11-20 This thesis highlights research explorations in quantum contextuality with photons Quantum contextuality is one of the most intriguing and peculiar predictions of quantum mechanics It is also a cornerstone in modern quantum information science It is the origin of the famous quantum nonlocality and various nonclassical paradoxes It is also a resource for many quantum information processing tasks and even universal quantum computing Therefore the study of quantum contextuality not only advances the comprehension of the foundations of quantum physics but also facilitates the practical applications of quantum information technology In the last fifteen years the study of quantum contextuality has developed from a purely theoretical level to a stage where direct experimental tests become amenable However the experimental research on contextuality at the current stage largely focuses on direct validations of some most famous predictions of contextuality while other forms of contextuality and its practical applications in quantum information science are rarely involved The research in this thesis is committed to bridge this gap from two directions 1 to construct and test stronger forms of contextuality and relieve the requirements of contextuality experiments on experimental platforms and 2 to explore the connections between contextuality and the other concepts in quantum information science and directly demonstrate the application of contextuality in broader scenarios Specifically the thesis have discussed the research topics about the relationship between quantum contextuality

and nonlocality the all versus nothing paradoxes from quantum contextuality the ore and post selection paradoxes from quantum contextuality and the topological protection and braiding dynamics of quantum contextuality in quasiparticle systems     *Digital Quantum Information Processing with Continuous-Variable Systems* Takaya Matsuura,2023-02-06 The book provides theoretical methods of connecting discrete variable quantum information processing to continuous variable one It covers the two major fields of quantum information processing quantum communication and quantum computation leading to achievement of a long sought full security of continuous variable quantum key distribution QKD and proposal of a resource efficient method for optical quantum computing Firstly the book provides a security of continuous variable QKD against arbitrary attacks under a realistic condition such as finite communication rounds and the use of digitized information processing The book also provides the unified view for conventionally used approximate Gottesman Kitaev Preskill GKP codes which encodes qudits on a continuous variable system enabling direct comparison between researches based on different approximations The book finally proposes a resource efficient method to realize the universal optical quantum computation using the GKP code via the direct preparation of the GKP magic state instead of GKP Pauli states Feasibility of the proposed protocol is discussed based on the existing experimental proposals for the GKP state preparation     *Debates and*
