Magic, Science and Society Alex Dennis, 2024-06-14 Magic Science and Society investigates the way the rationality debate has developed over the last century from E E Evans Pritchard s study of Azande magic through Peter Winch s argument that there can be no such thing as a social science across the arguments about the proper status of science in the 1970s and 1980s to the epistemological and ontological turns of the early twenty first century Different people have different understandings of what is rational some practise magic some orientate to legal convention and tradition and others defer to science and logic Starting with anthropological studies of witchcraft and working through to contemporary debates about epistemology and ontology in social science this book systematically examines the ways key questions about these issues have been framed and answered These include Can magic be real either for members of the cultures that practise it or more generally How can we arbitrate between different types of rationality Is science a benchmark for studying other forms of rationality or just a cultural practice like any other What are the implications of these issues for the social sciences themselves This book will be of interest to anthropologists sociologists philosophers of the social sciences and science studies practitioners

*Magic's Translations* Margaret J. Wiener, 2025-04-04 Do you believe in magic This familiar question

suggests magic is easily recognized but unreal In *Magic's Translations* Margaret J Wiener argues that such views are shaped by historical power struggles especially in Europe's relations with the wider world Focusing on nineteenth and twentieth century Dutch interactions with Indonesians Wiener reveals how colonial agents framed unfamiliar practices practitioners and objects as magic rendering distinct phenomena fundamentally alike and advancing colonizing projects that deemed magic antithetical to reason and reality While colonial authorities including ethnologists mobilized the concept of magic to differentiate Europeans from Indonesians nature from culture reason from superstition and fact from fetish their efforts produced unexpected outcomes Some Indonesian artifacts and acts not only retained their power but invaded European experiences As anthropologists were among the key translators of magic throughout the world Wiener intersperses accounts of magic's translations in the Indies with reflections on anthropology's ongoing engagement with the concept She demonstrates that magic became an object of expert knowledge political control and popular fascination rather than a self-evident category or relic of naïve belief

**The Anthropology of Magic** Susan Greenwood, 2020-05-28

Magic is arguably the least understood subject in anthropology today Exotic and fascinating it offers us a glimpse into another world but it also threatens to undermine the foundations of anthropology due to its supposed irrational and non-scientific nature Magic has thus often been explained away by social or psychological reduction *The Anthropology of Magic* redresses the balance and brings magic as an aspect of consciousness into focus through the use of classic texts and cutting edge research Suitable for student and scholar alike *The Anthropology of Magic* updates a classical anthropological debate concerning the nature of human experience A key theme is that human beings everywhere have the potential for magical consciousness Taking a new approach to some perennial topics in anthropology such as shamanism mythology witchcraft and healing the book raises crucial theoretical and methodological issues to provide the reader with an engaging and critical understanding of the dynamics of magic Join the live discussion on Facebook

Goodwyn,2015-08-20 How does a mind think magically The research documented in this book is one answer that allows the disciplines of anthropology and neurobiology to come together to reveal a largely hidden dynamic of magic Magic gets to the very heart of some theoretical and methodological difficulties encountered in the social and natural sciences especially to do with issues of rationality This book examines magic head on not through its instrumental aspects but as an orientation of consciousness Magical consciousness is affective associative and synchronistic shaped through individual experience within a particular environment This work focuses on an in depth case study using the anthropologist s own experience gained through years of anthropological fieldwork with British practitioners of magic As an ethnographic view it is an intimate study of the way in which the cognitive architecture of a mind engages the emotions and imagination in a pattern of meanings related to childhood experiences spiritual communications and the environment Although the detail of the involvement in magical consciousness presented here is necessarily specific the central tenets of *modus operandi* is common to magical thought in general and can be applied to cross cultural analyses to increase understanding of this ubiquitous human phenomenon

**Symbolic Forms as the Metaphysical Groundwork of the Organon of the Cultural Sciences** Israel Bar-Yehuda Idalovich,2014-10-16 This ambitious work reclassifies and restructures the history of ideas and the philosophy of culture through a wide ranging and novel use of the idea of the organon It does so by radically revising standard interpretations and theories of all branches of philosophy and by providing an intellectual and philosophical foundation for the new organon of the cultural sciences Furthermore the seeded idea that saw its growth in the form of this book is the unshakable conviction that the only way by which a new apparatus of philosophy an organon could be created is by harking back to the vast sources of imagination inspiration and *mim sis* This entire study is based on the notion that metaphysics insofar as it is concerned with the world in its entirety and with human being s existence and thought should provide the foundation for the organon of cultural sciences based on symbolic forms Given that the colossal amount of information and knowledge of philosophy arts humanities logic mathematics social sciences and natural sciences cannot be comprised analyzed and comprehended *per se* it is the organon s objective to extract the main principles ideas postulates theorems and theories of the cultural sciences and subsequently to shape and restructure them as symbolic forms Since all these principles are grounded on Becoming which is not a stable or fixed entity such as Being substance or thing the symbolic forms preserve and change elevate and further the organon of the cultural sciences via a critical dialectical process
