

What Materials Are Used For Magnetic Shielding And Why?

- Magnetic shielding is crucial for protecting sensitive devices from external magnetic fields, and the material choice impacts the shielding efficiency
- Key characteristics to consider are permeability (ability to support a magnetic field), saturation (maximum magnetic field a material can hold), and resistivity (resistance to electric current)
- Commonly used materials include Mu-metal, Supermalloy, Permalloy, Ferrites, and Carbon steel, each with specific properties making them suitable for different applications
- The selection should be based on the specific application and the type of magnetic field to be shielded
