

Electroencephalography (EEG) is the gold standard for seizure detection.

However, despite high temporal resolution, EEG has poor spatial resolution.

Resting state functional magnetic resonance imaging (rs-fMRI) may help map seizure topography, by detecting synchronization of blood-oxygen-level-dependent (BOLD) signal across the brain.

A patient with ongoing right hemispheric focal seizures after a cardiac arrest underwent rs-fMRI.

We used unbiased processing methods to detect rhythmic oscillations of BOLD signal.

Rhythmic BOLD signal, also detected in the contralateral cerebellum, may more precisely map seizure topography.

*MRI in Epilepsy* Horst Urbach, 2013-04-16 MRI can play an important role in identifying and localizing epileptogenic foci This book aims to provide the clinical and imaging information required in order to decide whether an MRI scan is appropriate and whether it is likely to be sufficient to detect a lesion The first part of the book presents background information on epilepsy patients and explains how to perform an MRI examination Detailed attention is paid to functional MRI and post processing and the examination of subcategories of patients is also discussed The second part of the book then documents the MRI findings obtained in the full range of epileptogenic lesions with the aid of high quality images Throughout emphasis is placed on guiding the reader in the correct interpretation of the imaging findings Both radiologists and referring physicians will find this book to be an indispensable guide to the optimal use of MRI in epilepsy

**Magnetic Resonance Scanning and Epilepsy** Simon D. Shorvon, D.R. Fish, F. Andermann, G.M. Bydder, H. Stefan, 2012-12-06 It was only in 1980 that the first recognisable magnetic resonance images of the human brain were

published by Moore and Holland from Nottingham University in England There then followed a number of clinical trials of brain imaging the most notable from the Hammersmith Hospital in London using a system designed by EMI the original manufacturers of the first CT machines A true revolution in medicine has ensued in only a few years there are thousands of scanning units and magnetic resonance imaging MRI has assumed a central importance in medical investigation It is an extraordinary fact that within a few years of development the esoteric physics of nuclear spin angular momentum and magnetic vector precession were harnessed to provide exquisite images of living anatomy modern science has no greater tribute That indisputable king of neurology and the oldest of recorded conditions epilepsy has not been untouched by the new technology indeed it is our view that the introduction of MRI of electroencephalography EEG in the late has been as important to epilepsy as was that 1930s Now for the first time the structural and aetiological basis of the condition is susceptible to thorough investigation and MRI can provide structural detail to parallel the functional detail of EEG MRI has the same potential as had EEG over 50 years ago to provide a new level of understanding of the basic mechanisms the clinical features and the treatment of epilepsy

*Neuroimaging in Epilepsy* Harry Chugani, MD, 2010-11-23 Perhaps the most important achievements in the field of epileptology in the past two decades have been in the neuroimaging and genetic breakthroughs as applied to patients with epilepsy Indeed neuroimaging has become a vital part in the study of epilepsy affecting broad aspects of the disorder ranging from diagnosis and classification to treatment and prognosis Neuroimaging in epilepsy encompasses many different approaches that have reached various levels of expertise across epilepsy centers worldwide This book discusses every imaging modality used to gather information on epilepsy Each technique is described by world experts and epilepsy centers worldwide

**Neuroimaging in Epilepsy** Gregory Cascino, Clifford R. Jack, 1996 A practical and well illustrated text on the techniques and procedures used in imaging in patients with epilepsy There exists no other textbook devoted solely to this topic The value of neuroimaging in patients with

seizures is great Patients with partial or focal restricted to a certain portion of the brain require CT or MRI scans to determine whether a brain lesion is associated with the epilepsy PET scans help to elucidate some of the metabolic changes that occur during seizures Evaluation and management of patients with epilepsy now routinely incorporate imaging techniques whether or not the patient undergoes surgery Drs Cascino and Jack have edited a highly illustrated and authoritative text on the topic They have enlisted internationally known authors from the US Canada England and Australia In addition the book is being published under the auspices of the Mayo Foundation
