Caneva, 2021-08-03 An examination of the sources Helmholtz drew upon for his formulation of the conservation of energy and the impact of his work on nineteenth century physics In 1847 Herman Helmholtz arguably the most important German physicist of the nineteenth century published his formulation of what became known as the conservation of energy unarguably the most important single development in physics of that century transforming what had been a conglomeration of separate topics into a coherent field unified by the concept of energy In Helmholtz and the Conservation of Energy Kenneth Caneva offers a detailed account of Helmholtz s work on the subject the sources that he drew upon the varying responses to his work from scientists of the era and the impact on physics as a discipline Caneva describes the set of abiding concerns that prompted Helmholtz s work including his rejection of the idea of a work performing vital force and investigates Helmholtz s relationship to both an older generation of physicists and an emerging community of reformist physiologists He analyzes Helmholtz s indebtedness to Johannes Müller and Justus Liebig and discusses Helmholtz s tense and ambivalent relationship to the work of Robert Mayer who had earlier proposed the uncreatability indestructibility and transformability of force Caneva examines Helmholtz s continued engagement with the subject his role in the acceptance of the conservation of energy as the central principle of physics and the eventual incorporation of the principle in textbooks as established science

Magnus Gray has come to Sagebrush Flats to write about the local zoo's latest rescue: an orphaned baby polar bear. But Magnus dreads the drama of small towns and is bullishly determined to keep to himself. June Winters is a people person and delights in welcoming Magnus to Sagebrush Flats, though it seems unlikely she can get the handsome stranger to crack a smile. Then a mishap with an open gate forces Magnus and June to deal with a stampeding flock of fainting goats, an adorable but clingy polar bear cub, a cranky pregnant camel, and two star-crossed honey badgers. Never mind small town drama; the lively animals may just convince these two that opposites really do attract.
