Mainstreaming Renewable Energy In The 21st Century:

Mainstreaming Renewable Energy in the 21st Century Janet Laughlin Sawin, 2004 Experience shows that renewable energy can advance dramatically worldwide if governments enact the right mix of policies summary **Energy Autonomy** Hermann Scheer, 2012 For 200 years industrial civilization has relied on the combustion of abundant and cheap carbon fuels But continued reliance has had perilous consequences On the one hand there is the insecurity of relying on the world's most unstable region the Middle East compounded by the imminence of peak oil growing scarcity and mounting prices On the other the potentially cataclysmic consequences of continuing to burn fossil fuels as the evidence of accelerating climate change shows Yet there is a solution to make the transition to renewable sources of energy and distributed decentralized energy generation It is a model that has been proven technologically commercially and politically as Scheer comprehensively demonstrates here The alternative of a return to nuclear power again being widely advocated he shows to be compromised and illusory The advantages of renewable energy are so clear and so overwhelming that resistance to them needs diagnosis which Scheer also provides showing why and how entrenched interests and one dimensional structures of thinking oppose the transition and what must be done to overcome these obstacles The new book from the award winning author of *THE SOLAR ECONOMY* and *A SOLAR MANIFESTO* demonstrates why the transition to renewable energy is essential and how it can be done The New Geographies of Energy Karl Zimmerer, 2013-09-13 The New Geographies of Energy Assessment and Analysis of Critical Landscapes is a pioneering collection of new geographic scholarship It examines such vitally important research topics as energy dilemmas of the United States large trends and patterns of energy consumption including China's role peak oil energy poverty and ethanol and other renewable energy sourcing The book offers advances in key emerging areas of energy research each distinguished in the following sections i geographic approaches to energy modeling and assessment ii fossil fuel landscapes iii the landscapes of renewable energy iv landscapes of energy consumption and v an overview of the new geographies of energy Karl Zimmerer *Annals Nature Society and Energy* issue editor and an essay on America's oil dependency Vaclav Smil renowned energy geographer In addition there is a specially commissioned book review This book was published as a special issue of the *Annals of the Association of American Geographers* *Climate Change* A. Barrie Pittock, 2013-11-26 It is widely accepted in the scientific community that climate change is a reality and that changes are happening with increasing rapidity In this second edition leading climate researcher Barrie Pittock revisits the effects that global warming is having on our planet in light of ever evolving scientific research Presenting all sides of the arguments about the science and possible remedies Pittock examines the latest analyses of climate change such as new and alarming observations regarding Arctic sea ice the recently published IPCC Fourth Assessment Report and the policies of the new Australian Government and how they affect the implementation of climate change initiatives New material focuses on massive investments in large scale renewables such as the kind being taken up in California as well as many smaller scale

activities in individual homes and businesses which are being driven by both regulatory and market mechanisms The book includes extensive endnotes with links to ongoing and updated information as well as some new illustrations While the message is clear that climate change is here and in some areas might already be having disastrous effects there is still hope for the future and the ideas presented here will inspire people to take action Climate Change The Science Impacts and Solutions is an important reference for students in environmental or social sciences policy makers and people who are genuinely concerned about the future of our environment

Green Economy and Green Jobs in China: Current Status and Potentials for 2020 , *Low-carbon Energy* Christopher Flavin, 2008 The road to low carbon energy Avoiding catastrophe A convenient truth No carbon energy Designing a new energy system Jumpstarting a revolution **Transforming Power** Dietrich Keeschull, 2017-09-08 In 1934 Lewis Mumford critiqued the industrial energy system as a key source of authoritarian economic and political tendencies in modern life Recent debate continues to engage issues of energy authoritarianism focusing on the contest between energy driven globalization the spread of energy deregulation and the simultaneous consolidation of the oil coal and gas industries and the so called sustainable energy strategy that celebrates the local and community scale characteristics of renewable energy Including theoretical inquiries and case studies by distinguished writers Transforming Power is divided into three parts Energy Environment and Society The Politics of Conventional Energy and The Politics of Sustainable Energy It interrogates current contemporary energy assumptions exploring the reflexive relationship between energy environment and society and examining energy as a social project Some of these have promised a prosperous future founded upon technological advances that further modernize the modern energy system such as inherently safe nuclear power environmentally friendly coal gasification and the advent of a wealthier cleaner world powered by fuel cells and the green technologies said by advocates to prefigure a revival of human scale development local self determination and a commitment to ecological balance br This volume offers a timely engagement of the social issues surrounding energy conflicts and contradictions It will be of interest to policymakers energy and environmental experts sociologists and historians of technology

Global Environmental Change: The Threat to Human Health Samuel S. Myers, 2009-11 Over the past two to three hundred years humanity's ecological footprint has ballooned to such an extent that we are now fundamentally altering the planet We have transformed the Earth's land surface and altered the function of its ecosystems and we are triggering the rapid loss of both terrestrial and marine life We are also profoundly changing our planet's climate It is increasingly apparent that the breadth and depth of the changes we are wreaking on the environment are imperiling not only many of the other species with which we share the ecological stage but the health and wellbeing of our own species as well Global climate change threatens human health in numerous and profound ways Large segments of the population will experience more heat waves altered exposure to infectious disease and more frequent natural disasters Most significantly climatic disruption threatens the adequacy of the core building blocks of health for large populations around the globe sufficient food and nutrition safe water for drinking and sanitation fresh air to breathe and secure homes to live in As climate change dismantles these central elements of healthy societies people with fewer resources will be forced to migrate in large numbers to lands where they may not be welcome A likely result of all of these processes will be increased civic instability and strife
