Islamic Astronomical Tables Benno van Dalen, 2023-05-31 This volume comprises nine articles on Islamic astronomy published since 1989 by Benno van Dalen. Van Dalen was the first historian of Islamic astronomy who made full use of the new possibilities of computers in the early 1990s. He implemented various statistical and numerical methods that can be used to determine the mathematical properties of medieval astronomical tables and utilized these to obtain entirely new until then unattainable historical results concerning the interdependence of individual tables and hence of entire astronomical works. His programmes for analysing tables making sexagesimal calculations and converting calendar dates continue to be widely used. The five articles in the first part of this collection explain the principles of a range of statistical methods for determining unknown parameter values underlying astronomical tables and present extensive step by step examples for their use. The four articles in the second part provide extensive studies of materials in unpublished primary sources on Islamic astronomy that heavily depend on these methods. The volume is completed with a detailed index. **The Other Plato** Dmitri

Nikulin, 2012-12-11 Offering a provocative alternative to the dominant approaches of Plato scholarship, the Tübingen School suggests that the dialogues do not tell the full story of Plato's philosophical teachings. Texts and fragments by his students and their followers, most famously Aristotle's *Physics*, point to an unwritten doctrine articulated by Plato at the Academy. These unwritten teachings had a more systematic character than those presented in the dialogues, which according to this interpretation were meant to be introductory. The Tübingen School reconstructs a historical, critical and systematic account of Plato that takes into account testimony about these teachings as well as the dialogues themselves. *The Other Plato* collects seminal and more recent essays by leading proponents of this approach, providing a comprehensive overview of the Tübingen School for English readers. **Aristotle's Metaphysics: Books A-E** Aristotle, 1924 **Alexander's East India and Colonial Magazine**, 1836 **A Directory of Names, Pennant Numbers, and Addresses of All Members of the International Ship Masters' Association of the Great Lakes** Ship Masters' Association of the Great Lakes, 1920

Noncommutative Geometry and Number Theory Caterina Consani, Matilde Marcolli, 2007-12-18 In recent years, number theory and arithmetic geometry have been enriched by new techniques from noncommutative geometry, operator algebras, dynamical systems and K-theory. This volume collects and presents up-to-date research topics in arithmetic and noncommutative geometry and ideas from physics that point to possible new connections between the fields of number theory, algebraic geometry and noncommutative geometry. The articles collected in this volume present new noncommutative geometry perspectives on classical topics of number theory and arithmetic, such as modular forms, class field theory, the theory of reductive p -adic groups, Shimura varieties, the local L -factors of arithmetic varieties. They also show how arithmetic appears naturally in noncommutative geometry and in physics in the residues of Feynman graphs in the properties of

noncommutative tori and in the quantum Hall effect **Radio Programs, 1924-1984** Vincent Terrace, 2015-09-02 This is an encyclopedic reference work to 1 802 radio programs broadcast from the years 1924 through 1984 Entries include casts character relationships plots and storylines announcers musicians producers hosts starting and ending dates of the programs networks running times production information and when appropriate information on the radio show s adaptation to television Many hundreds of program openings and closings are included *Aristotle's Metaphysics Beta* Michel Crubellier, André Laks, 2009-05-21 In this volume nine leading scholars of ancient philosophy offer a systematic study of Book Beta of Aristotle s *Metaphysics* They work through a series of problems which Aristotle presents discussing such topics as causation substance properties the ontology of both the perishable the imperishable world
