Handbook of Numerical Methods for the Solution of Algebraic and Transcendental Equations V. L. Zaguskin, 2014-05-12
Handbook of Numerical Methods for the Solution of Algebraic and Transcendental Equations provides information pertinent to algebraic and transcendental equations This book indicates a well grounded plan for the solution of an approximate equation Organized into six chapters this book begins with an overview of the solution of various equations This text then outlines a non traditional theory of the solution of approximate equations Other chapters consider the approximate methods for the calculation of roots of algebraic equations This book discusses as well the methods for making roots more accurate which are essential in the practical application of Berstoi s method The final chapter deals with the methods for the solution of simultaneous linear equations which are divided into direct methods and methods of successive approximation This book is a valuable resource for students engineers and research workers of institutes and industrial enterprises who are using mathematical methods in the solution of technical problems

Differential-algebraic Equations Peter Kunkel, 2006
Differential algebraic equations are a widely accepted tool for the modeling and simulation of constrained dynamical systems in numerous applications such as mechanical multibody systems electrical circuit simulation chemical engineering control theory fluid dynamics and many others This is the first comprehensive textbook that provides a systematic and detailed analysis of initial and boundary value problems for differential algebraic equations The analysis is developed from the theory of linear constant coefficient systems via linear variable coefficient systems to general nonlinear systems Further sections on control problems generalized inverses of differential algebraic operators generalized solutions and differential equations on manifolds complement the theoretical treatment of initial value problems Two major classes of numerical methods for differential algebraic equations Runge Kutta and BDF methods are discussed and analyzed with respect to convergence and order A chapter is devoted to index reduction methods that allow the numerical treatment of general differential algebraic equations The analysis and numerical solution of boundary value problems for differential algebraic equations is presented including multiple shooting and collocation methods A survey of current software packages for differential algebraic equations completes the text The book is addressed to graduate students and researchers in mathematics engineering and sciences as well as practitioners in industry A prerequisite is a standard course on the numerical solution of ordinary differential equations Numerous examples and exercises make the book suitable as a course textbook or for self study

The Numerical Solution of Differential-Algebraic Systems by Runge-Kutta Methods Ernst Hairer, Christian Lubich, Michel Roche, 2006-11-14 The term differential algebraic equation was coined to comprise differential equations with constraints differential equations on manifolds and singular implicit differential equations Such problems arise in a variety of applications e g constrained mechanical systems fluid dynamics chemical reaction kinetics simulation of electrical networks and control engineering From a more theoretical viewpoint the study of differential algebraic problems gives insight into the behaviour of numerical methods for stiff ordinary differential equations These lecture notes provide a self contained and comprehensive treatment of the numerical solution of differential algebraic systems using Runge Kutta methods and also extrapolation methods Readers are expected to have a background in the numerical treatment of ordinary differential equations The subject is treated in its various aspects ranging from the theory through the analysis to implementation and applications

Numerical Solution of Systems of Nonlinear Algebraic Equations George D. Byrne, Charles A. Hall, 2014-05-10 Numerical Solution of Systems of Nonlinear Algebraic Equations contains invited lectures of the NSF CBMS Regional Conference on the Numerical Solution of Nonlinear Algebraic Systems with Applications to Problems in Physics Engineering and Economics held on July 10 14 1972 This book is composed of 10 chapters and begins with the concepts of nonlinear algebraic equations in continuum mechanics The succeeding chapters deal with the numerical solution of quasilinear elliptic equations the nonlinear systems in semi infinite programming and the solution of large systems of linear algebraic equations These topics are followed by a survey of some computational techniques for the nonlinear least squares problem The remaining chapters explore the problem of nonlinear functional minimization the modification methods and the computer oriented algorithms for solving system These chapters also examine the principles of contractor theory of solving equations This book will prove useful to undergraduate and graduate students
