Nutrients And Cancer Prevention Experimental Biology Medicine S:

Functional Foods and Nutraceuticals in Cancer Prevention Ronald Ross Watson, 2008-02-28 Cancer is a leading cause of death among adults but research shows that the chances of developing cancer can be reduced by lifestyle changes. Increasing numbers of people use dietary vegetables, medicinal herbs, and plant extracts to prevent or treat cancer. Their availability, as over-the-counter supplements, has contributed to an explosion in the use of herbal extracts and related compounds for health enhancement. This vital resource brings together the world's leading experts, research, their conclusions, and recommendations on functional foods and nutraceuticals in the prevention and treatment of cancer. Research professionals, academics, hospital-based dietitians, nutritionists, oncology physicians, cancer researchers, marketers, and food and drug officials are just a few of the key people who need this book.

Primary and Secondary Preventive Nutrition Adrienne Bendich, Richard J. Deckelbaum, 2000-11-29 The Nutrition and Health series has been very fortunate to have each of the volumes recognized by rating services such as Doody's as valuable contributions for health professionals and individuals interested in the most up-to-date and balanced information from the experts in nutrition. These independent accolades may have occurred because the Nutrition and Health series has as its overriding mission to provide health professionals with texts that are considered essential because each book includes: 1 a synthesis of the state of the science; 2 timely in-depth reviews by the leading researchers in their respective fields; 3 extensive up-to-date fully annotated reference lists; 4 a detailed index; 5 relevant tables and figures; 6 identification of paradigm shifts and the consequences; 7 virtually no overlap of information between chapters but targeted inter-chapter referrals; 8 suggestions of areas for future research; and 9 balanced data-driven answers to patient questions which are based upon the totality of evidence rather than the findings of any single study. The series volumes are not the outcome of a symposium. Rather, each editor has the potential to examine a chosen area with a broad perspective both in subject matter as well as in the choice of chapter authors. The international perspective, especially with regard to public health initiatives, is emphasized where appropriate.

Mediterranean Diet Donato F. Romagnolo, Ornella I. Selmin, 2016-02-29 This text is an especially timely new text as the number of studies focusing on the impact of the Mediterranean diet on disease prevention increases every year. The fundamental question addressed in this text is how food components and behavior of the Mediterranean diet reduce the risk of chronic diseases. In-depth chapters provide an overview of preclinical and clinical studies on Mediterranean dietary patterns, food components, and lifestyle and their impact on health and disease. Large-scale omic approaches are highlighted to educate the reader about the molecular mechanisms through which specific components of the Mediterranean diet improve health and the opportunities and challenges for translating into practice the food recommendations of the Mediterranean pyramid. The volume concludes with information about the nutritional adequacy of Mediterranean foods and provides selected recipes. Mediterranean Diet Impact on Health and Disease will be of great interest to students, clinicians, and scientists engaged in promoting health through
