Messaging for Engineering National Academy of Engineering,Committee on Implementing Engineering Messages,2013-06-21 For those in the broad engineering community those who employ work with and or educate engineers and engineers themselves there is no need to explain the importance and value of engineering They understand that engineers help make the world a better place for all that they regularly grapple with important societal and environmental issues and that the engineering process is every bit as creative as composing a symphony or crafting a piece of art But the situation outside the engineering community is quite different Studies have shown that most K 12 students and teachers have a limited appreciation of all the ways that engineering makes their lives better and furthermore that they have little understanding of what engineers do or of the opportunities that an engineering education offers

Messaging for Engineering supports efforts by the engineering community to communicate more effectively about the profession and those who practice it This report builds on the 2008 NAE publication *Changing the Conversation Messages for Improving Public Understanding of Engineering* CTC which presented the results of a research based effort to develop and test new more effective messages about engineering The new messages cast engineering as inherently creative and concerned with human welfare as well as an emotionally satisfying calling This report summarizes progress in implementing the CTC messages but also recognizes that there is potential to galvanize additional action and thus suggests specific steps for major players in the engineering community to continue and build on progress to date Many of the report s recommendations resulted from discussion at a December 2010 committee workshop that involved several dozen high level decision makers representing key stakeholder groups in the engineering community

Interdisciplinarity, Creativity, and Learning Bharath Sriraman,Viktor Freiman,Nicole Lirette-Pitre,2009-06-01 Interdisciplinarity is increasingly viewed as a necessary ingredient in the training of future oriented 21st century disciplines that rely on both analytic and synthetic abilities across disciplines Nearly every curricular document or vision statement of schools and universities include a call for promoting creativity in students Yet the construct of creativity and giftedness across disciplines remains elusive in the sense that the prototypical examples of such work come from eminent scientists artists and mathematicians and little if any work has been conducted with non eminent individuals This monograph is an attempt to fill this gap by putting forth the view that interdisciplinarity and creativity are related constructs and that the cultivation of domain general creativity is possible Mathematics has historically been anchored to numerous disciplines like theology natural philosophy culture and art allowing for a flexibility of thought that is difficult to cultivate in other disciplines In this monograph the numerous chapters from Australia U S A Canada Cyprus Denmark and Japan provide a compelling illustration of the intricate connection of mathematics with literature paradoxes history technology and modeling thus serving as a conduit for interdisciplinarity creativity and learning to occur
