This book offers a detailed presentation of results needed to prove the Morse Homology Theorem using classical techniques from algebraic topology and homotopy theory. The text presents results that were formerly scattered in the mathematical literature in a single reference with complete and detailed proofs. The core material includes CW complexes, Morse theory, hyperbolic dynamical systems, the Lambda Lemma, the Stable Unstable Manifold Theorem, transversality theory, the Morse-Smale-Witten boundary operator, and Conley index theory.

Mathematical Reviews, 1995. **Collected Works of Raoul Bott** Robert D. MacPherson, 1993-11. Each of the four volumes that comprise the *Collected Papers* covers roughly a decade of work and is centered around a different subject: Vol 1 Topology and Lie Groups the 1950s 3613-7, Vol 2 Differential Operators the 1960s 3646-3, Vol 3 Foliations the 1970s 3647-1, and Vol 4 Mathematics Related to Physics the 1980s 3648-X. A number of essays on Bott's life and work were written especially for these volumes. Each volume has a separate mathematical introduction. There are accounts of the mathematical legacy of some of the individual papers by experts in the fields that these papers inaugurated. In addition, Bott provides a personal account of each individual paper. He also provides some articles which recount periods in his personal life. Annotation copyright by Book News Inc.
