Rapid Prototyping Of Application Specific Signal Processors:

Rapid Prototyping of Application Specific Signal Processors Mark A. Richards,Anthony J. Gadient,Geoffrey A. Frank,1997-02-28 Rapid Prototyping of Application Specific Signal Processors presents leading edge research that focuses on design methodology infrastructure support and scalable architectures developed by the 150 million dollar DARPA United States Department of Defense RASSP Program The contributions to this edited work include an introductory overview chapter that explains the origin concepts and status of this effort The RASSP Program is a multi year DARPA Tri Service initiative intended to dramatically improve the process by which complex digital systems particularly embedded signal processors are designed manufactured upgraded and supported This program was originally driven by military applications for signal processing The requirements of military applications for real time signal processing are typically more demanding than those of commercial applications but the time gap between technology employed in advanced military prototypes and commercial products is narrowing rapidly The research on methodologies infrastructure and architectures presented in this book is applicable to commercial signal processing systems that are in design now or will be developed before the end of the decade Rapid Prototyping of Application Specific Signal Processors is a valuable reference for developers of embedded digital systems particularly systems engineers for signal processing systems such as digital TV biomedical image processing systems and telecommunications and for military contractors who are developing signal processing systems This book will also be of interest to managers who are charged with responsibility for creating and maintaining environments and infrastructures for developing large embedded digital systems The chief value for managers will be the defining of methods and processes that reduce development time and cost **Rapid Prototyping of Application Specific Signal Processors Program** ,1992 This report discusses the results of the TI RASSP study efforts to identify a development process consistent with the RASSP program methodology In this study we defined the concept of a library based system design approach with in cycle and out of cycle development of library elements This report discusses this approach and the issues associated with system hardware and software design tools and manufacturing foundry interfaces required to support a library based system development approach The library based development concept is defined and the modularity and partitioning of a domain specific architecture is discussed A description of the library elements supporting a library based system design approach is provided Requirements issues and approaches to signal processing system design analyses and tradeoffs and system simulation and validation are discussed Data base representation issues frame words and interfaces required to provide a seamless RASSP development environment are identified Reusable software and library element development issues are addressed Hardware CAD issues associated with library element development system analyses simulation and validation are discussed Manufacturing foundry CAD CIM design tool interfaces and test issues are also discussed A summary of the effort and recommendations for implementation are also included *Application Specific Processors* Earl E. Swartzlander

Jr.,2012-12-06 Application Specific Processors is written for use by engineers who are developing specialized systems application specific systems Traditionally most high performance signal processors have been realized with application specific processors The explanation is that application specific processors can be tailored to exactly match the usually very demanding application requirements The result is that no processing power is wasted for unnecessary capabilities and maximum performance is achieved A disadvantage is that such processors have been expensive to design since each is a unique design that is customized to the specific application In the last decade computer aided design systems have been developed to facilitate the development of application specific integrated circuits The success of such ASIC CAD systems suggests that it should be possible to streamline the process of application specific processor design Application Specific Processors consists of eight chapters which provide a mixture of techniques and examples that relate to application specific processing The inclusion of techniques is expected to suggest additional research and to assist those who are faced with the requirement to implement efficient application specific processors The examples illustrate the application of the concepts and demonstrate the efficiency that can be achieved via application specific processors The chapters were written by members and former members of the application specific processing group at the University of Texas at Austin The first five chapters relate to specific arithmetic which often is the key to achieving high performance in application specific processors The next two chapters focus on signal processing systems and the final chapter examines the interconnection of possibly disparate elements to create systems **Rapid Prototyping of Application Specific Signal Processors (RASSP).** ,1993 This document provides for each of the computer aided design CAD tools in the initial baseline RAASP design environment a description of its role in the environment an assessment of strengths and weaknesses and manufacturer s contact information This RASSP initial design environment is summarized in Table 1 which specified the tool name the manufacturer and a short description of each tool The detailed description and assessment of each tool comprises the remainder of this document following the introduction **Specification and Design Methodology for Real-Time Embedded Systems** Randall S. Janka,2012-12-06 Specification and design methodology has seen significant growth as a research area over the last decade tracking but lagging behind VLSI design technology in general and the CAD industry in particular The commercial rush to market tries to leverage existing technology which fuels CAD design tool development Paralleling this is very active basic and applied research to investigate and move forward rational and effective methodologies for accomplishing digital design especially in the field of hardware software codesign It is this close relationship between industry and academia that makes close cooperation between researchers and practitioners so important and monographs like this that combine both abstract concept and pragmatic implementation deftly bridge this often gaping chasm It was at the IEEE ACM Eighth International Symposium on Hardware Software Codesign where I met the author of this monograph Dr Randall Janka who was presenting some of his recent dissertation research results on specification and design methodology or as he has so succinctly defined

this sometimes ambiguous concept the tools and rules Where so many codesign researchers are trying to prove out different aspects of codesign and using toy applications to do so Dr Janka had developed a complete specification and design methodology and prototyped the infrastructure and proven its viability utility and effectiveness using a demanding real world application of a real time synthetic aperture radar imaging processor that was implemented with embedded parallel processors   Wireless, Networking, Radar, Sensor Array Processing, and Nonlinear Signal Processing Vijay Madisetti,2018-09-03 Now available in a three volume set this updated and expanded edition of the bestselling The Digital Signal Processing Handbook continues to provide the engineering community with authoritative coverage of the fundamental and specialized aspects of information bearing signals in digital form Encompassing essential background material technical details standards and software the second edition reflects cutting edge information on signal processing algorithms and protocols related to speech audio multimedia and video processing technology associated with standards ranging from WiMax to MP3 audio low power high performance DSPs color image processing and chips on video Drawing on the experience of leading engineers researchers and scholars the three volume set contains 29 new chapters that address multimedia and Internet technologies tomography radar systems architecture standards and future applications in speech acoustics video radar and telecommunications This volume Wireless Networking Radar Sensor Array Processing and Nonlinear Signal Processing provides complete coverage of the foundations of signal processing related to wireless radar space time coding and mobile communications together with associated applications to networking storage and communications   **Cryptographic Hardware and Embedded Systems** Cetin K. Rammig,2013-03-09 Embedded systems are becoming one of the major driving forces in computer science Furthermore it is the impact of embedded information technology that dictates the pace in most engineering domains Nearly all technical products above a certain level of complexity are not only controlled but increasingly even dominated by their embedded computer systems Traditionally such embedded control systems have been implemented in a monolithic centralized way Recently distributed solutions are gaining increasing importance In this approach the control task is carried out by a number of controllers distributed over the entire system and connected by some interconnect network like fieldbuses Such a distributed embedded system may consist of a few controllers up to several hundred as in today s top range automobiles Distribution and parallelism in embedded systems design increase the

engineering challenges and require new development methods and tools This book is the result of the International Workshop on Distributed and Parallel Embedded Systems DIPES 98 organized by the International Federation for Information Processing IFIP Working Groups 10 3 Concurrent Systems and 10 5 Design and Engineering of Electronic Systems The workshop took place in October 1998 in Schloss Eringerfeld near Paderborn Germany and the resulting book reflects the most recent points of view of experts from Brazil Finland France Germany Italy Portugal and the USA The book is organized in six chapters Formalisms for Embedded System Design IP based system design and various approaches to multi language formalisms Synthesis from Synchronous Asynchronous Specification Synthesis techniques based on Message Sequence Charts MSC StateCharts and Predicate Transition Nets Partitioning and Load Balancing Application in simulation models and target systems Verification and Validation Formal techniques for precise verification and more pragmatic approaches to validation Design Environments for distributed embedded systems and their impact on the industrial state of the art Object Oriented Approaches Impact of OO techniques on distributed embedded systems LIST This volume will be essential reading for computer science researchers and application developers   *Application Specific Processors* Earl E. Congress. Senate. Committee on Armed Services,1997   Quick-Turnaround ASIC Design in VHDL N. Bouden-Romdhane,Vijay Madisetti,J.W. Hines,2012-12-06 From the Foreword Modern digital signal processing applications provide a large challenge to the system designer Algorithms are becoming increasingly complex and yet they must be realized with tight performance constraints Nevertheless these DSP algorithms are often built from many constituent canonical subtasks e g IIR and FIR filters FFTs that can be reused in other subtasks Design is then a problem of composing these core entities into a cohesive whole to provide both the intended functionality and the required performance In order to organize the design process there have been two major approaches The top down approach starts with an abstract concise functional description which can be quickly generated On the other hand the bottom up approach starts from a detailed low level design where performance can be directly assessed but where the requisite design and interface detail take a long time to generate In this book the authors show a way to effectively resolve this tension by retaining the high level conciseness of VHDL while parameterizing it to get

good fit to specific applications through reuse of core library components Since they build on a pre designed set of core elements accurate area speed and power estimates can be percolated to high level design routines which explore the design space Results are impressive and the cost model provided will prove to be very useful Overall the authors have provided an up to date approach doing a good job at getting performance out of high level design The methodology provided makes good use of extant design tools and is realistic in terms of the industrial design process The approach is interesting in its own right but is also of direct utility and it will give the existing DSP CAD tools a highly competitive alternative The techniques described have been developed within ARPAs RASSP Rapid Prototyping of Application Specific SignalProcessors project and should be of great interest there as well as to many industrial designers Professor Jonathan Allen Massachusetts Institute of Technology *Defense Issues ,* Scientific and Technical Aerospace Reports ,1995 Lists citations with abstracts for aerospace related reports obtained from world wide sources and announces documents that have recently been entered into the NASA Scientific and Technical Information Database **Advances in Computers** ,1995-09-11 Praise for the SeriesMandatory for academic libraries supporting computer science departments CHOICESince its first volume in 1960 Advances in Computers has presented detailed coverage of innovations in computer hardware software theory design and applications It has also provided contributors with a medium in which they can explore their subjects in greater depth and breadth than journal articles usually allow As a result many articles have become standard references that continue to be of sugnificant lasting value in this rapidly expanding field
