

Criterion	Metrics and thresholds
Convergent validity (redundancy analysis)	≥ 0.708 correlation between the formative construct and a reflective (or single-item) measurement of the same concept
Collinearity	Critical collinearity issues likely occur if $VIF \geq 5$ Collinearity issues are usually uncritical if $VIF = 3-5$ Collinearity is not a problematic issue if $VIF < 3$
Statistical significance of indicator weights	t-values are greater than 2.576 ($\alpha = 0.01$), 1.960 ($\alpha = 0.05$), or 1.645 ($\alpha = 0.10$), respectively (two tailed) The 95% percentile confidence interval ($\alpha = 0.05$) does not include zero
Relevance of indicators with a significant weight	Larger significant indicator weights indicate a higher relative contribution of the indicator to the construct
Relevance of indicators with nonsignificant weights	Indicators with loadings of ≥ 0.50 that are statistically significant are considered relevant

A. Siebbeles, Ferdinand C. Grozema, 2011-07-18 As functional elements in optoelectronic devices approach the single-molecule limit conducting organic molecular wires are the appropriate interconnects that enable transport of charges and charge-like particles such as excitons within the device Reproducible syntheses and a thorough understanding of the underlying principles are therefore indispensable for applications like even smaller transistors molecular machines and light harvesting materials Bringing together experiment and theory to enable applications in real-life devices this handbook and ready reference provides essential information on how to control and direct charge transport Readers can therefore obtain a balanced view of charge and exciton transport covering characterization techniques such as spectroscopy and current measurements together with quantitative models Researchers are thus able to improve the performance of newly developed devices while an additional overview of synthesis methods highlights ways of producing different organic wires Written with the following market in mind chemists molecular physicists materials scientists and electrical engineers Bioprocess Engineering Principles Pauline M. Doran, 1995-04-03 The emergence and refinement of techniques in molecular biology has changed our perceptions of medicine agriculture and environmental management Scientific breakthroughs in gene expression protein engineering and cell fusion are being translated by a strengthening biotechnology industry into revolutionary new products and services Many a student has been enticed by the promise of biotechnology and the excitement of being near the cutting edge of scientific advancement However graduates trained in molecular biology and cell manipulation soon realise that these techniques are only part of the picture Reaping the full benefits of biotechnology requires manufacturing capability involving the large-scale processing of biological material Increasingly biotechnologists are being employed by companies to work in co-operation with chemical engineers to achieve pragmatic commercial goals For many years aspects of biochemistry and molecular genetics have been included in chemical engineering curricula yet there has been little attempt until recently to teach aspects of engineering applicable to process design to biotechnologists This textbook is the first to present the principles of bioprocess engineering in a way that is accessible to biological scientists Other texts on bioprocess engineering currently available assume that the reader already has engineering training On the other hand chemical engineering textbooks do not consider examples from bioprocessing and are written almost exclusively with the petroleum and chemical industries in mind This publication explains process analysis from an engineering point of view but refers exclusively to the treatment of biological systems Over

170 problems and worked examples encompass a wide range of applications including recombinant cells plant and animal cell cultures immobilised catalysts as well as traditional fermentation systems First book to present the principles of bioprocess engineering in a way that is accessible to biological scientists Explains process analysis from an engineering point of view but uses worked examples relating to biological systems Comprehensive single authored 170 problems and worked examples encompass a wide range of applications involving recombinant plant and animal cell cultures immobilized catalysts and traditional fermentation systems 13 chapters organized according to engineering sub disciplines are grouped in four sections Introduction Material and Energy Balances Physical Processes and Reactions and Reactors Each chapter includes a set of problems and exercises for the student key references and a list of suggestions for further reading Includes useful appendices detailing conversion factors physical and chemical property data steam tables mathematical rules and a list of symbols used Suitable for course adoption follows closely curricula used on most bioprocessing and process biotechnology courses at senior undergraduate and graduate levels

Invariant Measurement with Raters and Rating Scales George Engelhard Jr., Stefanie Wind, 2017-12-15 The purpose of this book is to present methods for developing evaluating and maintaining rater mediated assessment systems Rater mediated assessments involve ratings that are assigned by raters to persons responding to constructed response items e g written essays and teacher portfolios and other types of performance assessments This book addresses the following topics 1 introduction to the principles of invariant measurement 2 application of the principles of invariant measurement to rater mediated assessments 3 description of the lens model for rater judgments 4 integration of principles of invariant measurement with the lens model of cognitive processes of raters 5 illustration of substantive and psychometric issues related to rater mediated assessments in terms of validity reliability and fairness and 6 discussion of theoretical and practical issues related to rater mediated assessment systems Invariant measurement is fast becoming the dominant paradigm for assessment systems around the world and this book provides an invaluable resource for graduate students measurement practitioners substantive theorists in the human sciences and other individuals interested in invariant measurement when judgments are obtained with rating scales

More Statistical and Methodological Myths and Urban Legends Charles E. Lance, Robert J. Vandenberg, 2014-11-05 This book provides an up to date review of commonly undertaken methodological and statistical practices that are based partially in sound scientific rationale and partially in unfounded lore Some examples of these methodological urban legends are characterized by manuscript critiques such as a your self report measures suffer from common method bias b your item to subject ratios are too low c you can't generalize these findings to the real world or d your effect sizes are too low What do these critiques mean and what is their historical basis *More Statistical and Methodological Myths and Urban Legends* catalogs several of these quirky practices and outlines proper research techniques Topics covered include sample size requirements missing data bias in correlation matrices negative wording in survey research and much more
