Low Dose Radiation:

The Million Person Study of Low-Dose Radiation Health Effects John D. Boice Jr, André Bouville, Lawrence T. Dauer, Ashley P. Golden, Richard Wakeford, 2024-11-25 This book presents original research findings of The Million Person Study of Low Dose Radiation Health Effects MPS the largest and most comprehensive epidemiologic study of its kind to investigate the health effects of low level chronic radiation exposure on American workers and veterans throughout the 20th century Since the early 1900s epidemiologists have studied the consequences of radiation exposures yet the health effects of low levels received gradually over time remain unresolved This uncertainty comes at a time when the public and workers are experiencing ever increasing levels of radiation exposure from advances in medical radiation imaging techniques e g CT scans frequent flying at high altitudes and environmental and occupational exposures The MPS is providing answers by studying 30 radiation exposed U S populations including workers at nuclear power plants radiologists workers at former Manhattan Project sites nuclear submariners nuclear weapons test participants atomic veterans industrial radiographers and radium dial painters Ongoing for more than 20 years and coordinated by the National Council on Radiation Protection and Measurements Vanderbilt University Medical Center and Memorial Sloan Kettering Cancer Center the MPS is a national effort supported by the Department of Energy National Aeronautics and Space Administration U S Navy Defense Threat Reduction Agency Nuclear Regulatory Commission Centers for Disease Control and Prevention and the Environmental Protection Agency Unparalleled in scope and quality the MPS provides an understanding of low dose health effects that is desperately needed for decision makers and the radiation protection community as society continues to increase the uses of radiation technologies Individual chapters were originally published in the International Journal of Radiation Biology

The Future of Low Dose Radiation Research in the United States National Academies of Sciences, Engineering, and Medicine, Division on Earth and Life Studies, Nuclear and Radiation Studies Board, 2020-01-13 Exposures at low doses of radiation generally taken to mean doses below 100 millisieverts are of primary interest for setting standards for protecting individuals against the adverse effects of ionizing radiation However there are considerable uncertainties associated with current best estimates of risks and gaps in knowledge on critical scientific issues that relate to low dose radiation The Nuclear and Radiation Studies Board of the National Academies hosted the symposium on The Future of Low Dose Radiation Research in the United States on May 8 and 9 2019 The goal of the symposium was to provide an open forum for a national discussion on the need for a long term strategy to guide a low dose radiation research program in the United States The symposium featured presentations on low dose radiation programs around the world panel discussions with representatives from governmental and nongovernmental organizations about the need for a low dose radiation research program reviews of low dose radiation research in epidemiology and radiation biology including new directions and lessons to be learned from setting up large research programs in non radiation research fields This publication summarizes the presentation and

discussion of the symposium **Health Effects of Low Dose Radiation** ,1997 This book examines the current state of our knowledge about the health effects of radiation and looks forward to exciting developments in our understanding of the mechanisms of radiation s interaction with biological systems and the magnitude of the risks as the twenty first century approaches Papers address the epidemiology of nuclear workforces atomic bomb survivors and those affected bythe Chernobyl accident as well as studies into the effects of radiation at the cellular an *Low Dose Exposures in the Environment* C. Streffer,H. Bolt,D. Follesdal,P. Hall,J.G. Hengstler,P. Jacob,D Oughton,K. Prieß,E. Rehbinder,E. Swaton,2013-11-11 The ever increasing release of harmful agents due to human activities have led in some areas of the world to heavy pollution In order to protect human health and the environment environmental standards that shall limit the release and the concentration of those toxic agents in the environment and hence the exposure to it have to be established The related assessment and decision making procedures have to be based on solid scientific data about the effects and mechanisms of these agents as well as on ethical social and economic aspects For risk evaluation the knowledge of the dose response curve is an essential prerequisite Dose responses without a threshold dose are most critical in this connection Such dose responses are assumed for mutagenic and carcinogenic effects which therefore dominate also the discussion in this book In the environmentally important low dose range risk estimation can only be achieved by extrapolation from higher doses with measurable effects The extrapolation is accompanied with uncertainties which makes risk evaluation as well as risk communication frequently problematic In order to ensure rational efficient and fair decisions beyond a sound scientific assessment the dialogue between disciplines with the affected people and with the general public is necessary In this book the whole range of relevant and essential aspects of risk evaluation and standard setting is addressed Starting with the ethical foundations the sound analysis of recent scientific findings sets the frame for further reflections by theory of cognition psychosocial sciences and jurisprudence The authors end up with concluding recommendations for coping with the recent problems of standard setting in the field of environmentally relevant low doses The book is designed to a readership of scientists legislators administrators and the interested public **Preservation of Food by Low-dose Ionizing Energy** Quartermaster Research and Engineering Center (U.S.),1961 **Perez and Brady's Principles and Practice of Radiation Oncology** Edward C. Halperin,Carlos A. Perez,Luther W. Brady,2008 The thoroughly updated fifth edition of this landmark work has been extensively revised to better represent the rapidly changing field of radiation oncology and to provide an understanding of the many aspects of radiation oncology This edition places greater emphasis on use of radiation treatment in palliative and supportive care as well as therapy The Effects of Low Dose Radiation Elena Burlakova,Valeria Naiditch,2004-08-31 The papers collected in this book show the results of investigations performed by Russian scientists in the field of low dose irradiation action It is confirmed that low doses do have effects on the human organism and the environment and that the most serious consequences are observed in the far post irradiation period This branch of

radiobiology *Leveraging Advances in Modern Science to Revitalize Low-Dose Radiation Research in the United States*
National Academies Of Sciences Engineering, National Academies of Sciences Engineering and Medicine, Division On Earth And Life Studies, Nuclear And Radiation Studies Board, Committee on Developing a Long-Term Strategy for Low-Dose Radiation Research in the United States, 2023-03-02 Radiation exposure at low doses below 100 milligray or low dose rates less than 5 milligray per hour occurs in a wide range of medical industrial military and commercial settings The effects of exposure at these levels are not fully understood but there are long standing concerns that such exposure could negatively affect human health Although cancer has been linked to low dose radiation exposure for decades there is increasing evidence that low dose radiation exposure may also be associated with cardiovascular disease neurological disorders immune dysfunction and cataracts Recent advances in research new tools and a coordinated multidisciplinary research program could help fill knowledge gaps about the health impacts of low dose radiation exposures This report calls for the development of a U S research program to study how low doses of radiation affect cancer cardiovascular disease neurological disorders and other disease risks Research should also better define the impacts of radiation doses dose rates types of radiation and exposure duration The report estimates 100 million annually for the next 15 years would be required to conduct epidemiological and biological research and to establish an infrastructure for research **Dose, Benefit, and Risk in Medical Imaging**
Lawrence T. Dauer, Bae P. Chu, Pat B. Zanzonico, 2018-10-11 This timely overview of dose benefit and risk in medical imaging explains to readers how to apply this information for informed decision making that improves patient outcomes The chapters cover patient and physician perspectives referral guidelines appropriateness criteria and quantifying medical imaging benefits The authors have included essential discussion about radiologic physics in medical imaging fundamentals of dose and image quality risk assessment and techniques for optimization and dose reduction The book highlights practical implementation aspects with useful case studies and checklists for treatment planning Clinicians students residents and professionals in medical physics biomedical engineering radiology oncology and allied disciplines will find this book an essential resource with the following key features Discusses risk benefit dose optimization safety regulation radiological protection and shared informed decision making Covers regulatory oversight by government agencies manufacturers and societies Highlights best practices for improving patient safety and outcomes Gives guidelines on doses associated with specific procedures **Radiobiology and Radiation Hormesis** Charles L. Sanders, 2017-08-08 This book presents new information on radiobiology that more clearly refutes the linear no threshold LNT assumption and supports radiation hormesis Fresh light is cast on the mechanisms of radiation hormesis and the potential benefits of low dose ionizing radiation in preventing and treating a wide variety of inflammatory and proliferative diseases It is proposed that these effects may derive from cellular communication via electromagnetic waves directed by DNA with each cell acting as a quantum computer Readers will also find close analysis of the negative impacts of radiophobia on many aspects of modern life including

attitudes to imaging technologies licensing of nuclear power reactors and preparedness for survival of nuclear war The book will be of interest to researchers and scientists in radiobiology radiation protection health physics medical physics and radiology Specifically it will provide medical physicians radiation oncologists radiation epidemiologists gerontologists cell biologists toxicologists and nuclear engineers with a wide range of interesting facts and enlightening novel perspectives
